"The possibilities of producing flax for fiber in Canada have been proven to be very considerable. It would seem wise, therefore, to do anything possible to encourage the growth of this industry in districts suited thereto at this time, when unusually high prices will serve as an impetus to its development and extension." So writes the director of Dominion experimental farms, while the Dominion botanist speaks of "enhanced interest in the industry for which there certainly is a wide scope in suitable localities in the Dominion of Canada." Both these remarks were prompted by the publication of bulletin No. 28, second series experimental farm, at Ottawa, entitled. Flax for Fiber; its cultivation and handling, written by J. Adams, M.A., assistant Dominion botanist, who for years was associated with the flax industry in Ireland. The cultivation of flax, as Mr. Adams says, is antiquity. Every Biblical student will recall that in the account of the destruction wrought by hail in Egypt, it is written that "the barley was in the ear and the flax was boiled." Flax is grown in Canada to some extent, but not judging by statements of authorities, to the extent that the demand, the price, usefulness and the soil and climatic conditions warrant. Adams, in his bulletin, which can be 7.00 had free by application to the pub-2.50 lication branch, department of agriculture, Ottawa, describes the plant in all its particulars, tells of the soil with illuminative drawings and with quired in its cultivation and

Domestic Equipment Business Returns 18 Per Cent. Current Profit.

New York, Dec. 8 .- In connection with the \$20 per share in dividends on New York Air Brake which is assured for the next year and a quarter it is interesting to note that certain profits from regular domestic equipment business for the last two months have been running at the rate of better than 18 per cent., says the Wall

Street Journal. In other words, the company is making a very slight inroad into its war profits in order to promise shareholders \$5 per quarter for the next

five quarters. The regular dividend rate is \$10 per share. From domestic business alone this is being nearly twice earn-

THOMPSON-KRIST

Mining Company, Limited (Incorporated under the Ontario Companies Act)

Capital, \$2,500,000

The property of the Thompson-Krist ties to the Hollinger Consolidated, Porcupine Crown, North Thompson and Vipond.

The Hollinger in five years has paid over \$5,000,000 in dividends, which is nearly 200% on the original capital. The Porcupine Crown has paid 12% annually for over three years, and is now in

The North Thompson has ore blocked

richer ore and in better condition than

Issued, \$1,500,000 out to a value of over \$1,000,000. The Vipond is now reported to be earning over

\$10,000 per month. Thus, the Thompson-Krist is virtually surrounded by mines which are now the

great producers of Porcupine. It has been definitely proven that the vein systems of some of these properties carry through the Thompson-Krist property, and that the geological formation of the Thompson-Krist is identical with all of them.
