What They Can

Grow Beans and Potatoes as Concen-

"Provide People's Food.

WITH CONSUMPTION.

Guelph, April 26.—Meatless days are staring Ontario in the face, and not only in this province but all over to thirty per cent. greater yield than the world there is a serious shortage small, plump seed or shrunken seed. ple in the war zone, where the number of non-producing consumers has been increased by millions.

Allies? What can Ontario do? Another year like 1916 would bring still higher prices for foodstuffs, and crease in the yield per acre of 48

Although seriously handicapped by... the great shortage of labor. Ontario's patriotic and progressive farmers are doing their best to "save the situa-Day after day Prof. C. A Zavitz, of the Ontario Agricultural College, is besieged by mail and telephone with inquiries as to how best the problem can be met. What are the best varieties of seed for Ontario? What should the farmers of Ontario do? When is the best time to do it. and what is the best method? These are samples of the questions fired at the professor of field husbandry and Goose. the director of field experiments.

### Production Falls Behind.

In an interview Prof. Zavitz said that production of food is not keeping pace with consumption. The number of producers of agricultural food, materials, in comparison with the non-producing consumers, is rapidly

large acres of grass lands this spring. It is true that the growing of beans

It is therefore incumbent upon every individual so make the most of the valuable land by using the smaller as well as the larger areas for the production of those crops which will

While it is important to increases as much as possible such food products as potatoes and turnips, it is exceedingly important to increase as much às possible valuable concentrated food materials, such as beans and spring wheat.

### Use Best Varities.

"The most important thing for the armers of Ontario to do at the present time," said Prof. Zavitz, "is to introduce a system of economizing in time and labor, with a view to in-PRODUCTION NOT KEEPING PACE creased production, and this can be wonderfully helped by securing the best varieties and the best quality of seed and having each kind ready for sowing at exactly the right time. trated Food-Importance of Good There is far more in this statement Seed Emphasized-Great Duty to than many people realize. Some varieties of a certain crop will produce fifty per cent, more food than other varieties of the same classes. Large, plump seed will produce from fifteen

"The grain should be sown in the Reserve supplies are lower spring in the order of spring wheat, perhaps than they have ever been, barley, oats and field peas, and it is Starvation threatens the poorer peo- important to get these in the land as soon as possible after the land can be worked to good advantage. After the first week has passed in which these grains can be sown there Who is to provide food for the is a decided decrease in the yield per acre for every day's delay. For instance, for every day's delay after the first week there is an average destarvation to many across pounds of oats, 47 pounds of barley. 28 pounds of spring wheat and 12 pounds of peas.

"Experiments show that on the average potatoes give the best results. when planted about the 20th May and field beans about the 1st June. The seeding of turnips might be delayed until the third week of June. This is

### HOW THE GERMANS HINDER THE ADVANCE OF THE ALLIES

In order to obstruct the French advance the Germans exploded mines both in the main streets of Roye and in the roads leading into the town. The huge crate formed by one such explosion is here seen in the foreground. It is full of water. The enemy did not content himself with such legitimate means of warfare, but also destroyed many of the buildings, besides pillaging and burning in all directions. This also is true of all other towns and cities which the Germans have evacuated.

requires more labor than pasture and Tife and hay crops but it is equally true that they can be cultivated without a very large amount of skill and that the returns are more satisfactory. It may be mentioned that last year one "Some of the best varieties of Huron county grower had \$9,000 "There are a number of varieties

Spring wheat: Marquis and Wind of beans, but the most suitable for growing at the present time." said Prof. Zavitz, "is the small white pea They Came Out of the Desert to Plenty in Peas: Canadian Beauty and Ar- beam. ## As the Years Pass By

It is only with the passing of time that a Road can be properly judged. All roads look good the day they are completed. But what a difference in them as the years

The oldest Concrete Road in Wayne County, Michigan, is new in its eighth year of service. It has carried an estimated total traffic of over 7,000,000 vehicles of all kinds. Its condition to-day emphasizes the importance of having all through Canada just such

### Permanent Highways of Concrete

The Roadway Engineers of Wayne County have discovered that the road referred to shows surface-wear so slight that it is difficult to measure. The usual estimate places this at from 1 to 1 inch. At that rate, it will take a hundred years for the road to wear out. But it will NOT wear out at that rate—nor anything like it.

For concrete is weakest when new. Concrete constantly increases in strength after it is properly "set." Concrete is the truly durable material for road building. Its life is so loc. that even if it cost more to build than it loes, it wow. will be the cheapest road in the long run, for any community to build

Other facts about Concrete, contained in our interesting Road Books, sent free to all who enquire.
