

MICHELIN

Twelve Tire Tests No. 4 Tube-Life

YOU have often noticed that ordinary gray rubber bands grow brittle with age—especially if exposed to heat and the sun's rays. So with inner tubes. The heat developed in tires while driving, and the disintegrating effects of time render many inner tubes brittle and porous, thus destroying their usefulness.

The test herein described was made by Michelin engineers to help you determine the durability of various makes of inner tubes.

Each of the tubes shown was made by cementing half a Michelin Tube to half a tube of another make—this other make being different in each case.

The tubes were then run to destruction on the road under normal conditions. One by one the other sections blew out while the Michelin sections remained intact.

Michelin Tubes are used by the great majority of motorists today—and have proved themselves most durable and economical.

This series of twelve tests is designed to take the uncertainty out of tire-buying.

Hard hauling on bad Roads Results in high prices on garden truck

"Farmers living along the Hamilton-Toronto Highway are putting booths in front of their farms, where motorists can buy vegetables and fruit, fresh from the soil, and take them home."—Toronto Star.

Permanent Highways of Concrete

bring the city man to the farmer. Motoring out to the country he gets his fresh vegetables and fruit at a difference in price which will more than cover his cost of gasoline. The farmer sells his produce at the roadside without cost of transportation or loss of time away from home. But, of course, he still goes to market—only to-day he uses an automobile or a motor truck. If he is fortunate enough to live on a Concrete highway, he hauls large loads at low cost—he can get to market regularly and quickly. So he raises more market produce which he can afford to sell cheaper.

City and country alike are interested in permanent highways of concrete. To "book" intelligently you must have the facts. Write for our free Concrete literature.

CONCRETE FOR PERMANENCE

How You Can Get More Money For Your WOOL
When I discovered many years ago the great difference between the amount of money the Farmer usually received from the peddler or small dealer for his wool, and the price at which the peddler or dealer sold the wool to us; I was amazed.
Of course nearly all the wool eventually comes to ourselves and a few large dealers—but the greater number of hands thro' which it has to travel the smaller the price the farmer receives as each one has to have a profit.
Consequently it seemed to me good business to deal directly with the farmer and pay him the much higher prices which we used to pay to the peddlers and middlemen—thus eliminating the peddler and middleman to a great degree.
By shipping direct to us the Farmer secures a very much higher price for his wool which in a good many cases means a profit instead of a loss to him.
The satisfaction expressed by the many Farmers who shipped their wool direct to us for many years is so great that I am encouraged to continue the same policy to a greater extent this year.
For over 30 years I have been buying wool and know the market from A to Z.
Before selling your wool this season don't fail to write me first for prices, stating the number and breed of sheep you have.
The Farmers who ship to me receive their cash in full by return mail—at highest Toronto prices—with no deductions except transportation costs.
I have published a book on "Sheep-raising" and preparing wool for market—that is very useful to all shippers. Send your name and address and I shall be glad to send you a copy free. Write for it today—address me personally, using Desk number as follows—
