DARTING, PIERCING SCIATIC PAINS

Give way before the penetrating effects of Sloan's Liniment

So do those rheumatic twinges and the lumbago, the nerve-inflammation of neuritis, the wry neck, the joint wrench, the ligament sprain, the muscle strain, and the throbbing bruise.

The ease of applying, the quickness of relief, the positive results, the cleanliness, and the economy of Sloan's Liniment make it universally preferred. Made in Canada.

Sloan's Liniment

Kills Pain

MELONS HAVE ENEMIES

APHIS DOES HARM TO PLANT VERY QUICKLY.

Pest Sucks Juices of Plant, Causes Them to Wither and Die. But It Can Be Fought With Nicotine Sulphate, and Power Spray Secures Excellent Results.

Melon growing is becoming increasingly popular in the farming parts of Canada, and it has its own peculiar problems. Severe losses by the melon aphis, or "melon louse," can be largely reduced and in many cases prevented by the use of control measures upon the first appearance of the insect. Spraying with nicotine sulphate, so far has given the best results, but there are other methods of combating the pest.

New to the striped cucumber beetle the melon aphis is the most important cucumber insect pest and probably the most serious enemy of melons and related crops in this country. It works quickly, sucking

Spraying Outfit Suitable for Use to Control Melon Aphid.

the juices of the plants and causing them to wither and die, often before insect injury is suspected. Whole fields are destroyed in a few days. The melon aphis has more than forty enemies which hold it in check in many regions much of the time, but artificial control becomes imperative when weather conditions are unfavorable to its parasites.

The following directions for combating the pest are given in the bulletin:

1. Examine the melon or cucumber field in several places from time to time in order that the melon aphis may not cause serious damage before detection.

2. When the aphis is found, do not wait to find out whether it is going to increase, but begin spraying at once.

3. Be sure to use the correct formula and apply it properly and thoroughly, making frequent inspections to ascertain that the undersides of the leaves are well covered.

4. Use plenty of spray mixture—200 gallons to the acre, if necessary—and apply at high pressure, about 150 pounds if possible.

If the work is undertaken in time, the bulletin points out, and directions are carefully followed, there should be no difficulty in protecting a field of cucumbers or melons against the ravages of the melon aphis and obtaining a good yield.

As a spray for the melon aphis and other plant lice nicotine sulphate thus far has given the best results. The following formula is said to combine the ingredients in the proper proportions:

Nicotine sulphate, 40 per cent. fluid ounces 3
Yellow laundry soap, avoidupois pounds 1
Water, gallons 25

On account of the low spraying nature of the vine growth, a much more even distribution of the spray is effected by a power sprayer than by a hand-operated machine.

Soaps of nearly every kind are valuable as sprays for the control of the melon aphis and others of its kind. Kerosene soap emulsion, a standard remedy for sucking insects such as plant lice, is regarded as secondary in value to the nicotine sulphate solution. Where only a few plants are infested and it is possible to direct a strong stream of water upon them the aphis can be checked materially in this manner without use of other substances.

The melon aphis is partial to the cantaloupe and other melons, cucumbers, gourds, squash, pumpkins, and other cucurbits, cotton, okra, and oranges and other citrus fruits, all food plants upon which the insects feed and multiply.

Women Driving Autos.

There are few sections in which the auto is more largely used than it is in Kent. "In two years," Mr. P. H. Boyer, ex-M.P.P., stated recently, "250 autos have been sold by Kenton dealers alone, and most of the machines were bought by farmers."

The auto is not, however, a mere joy machine with Kent farmers. In a recent run through the county it seemed as if at least four out of five of the cars met were being driven by women, and in most cases with only the driver in the car. If further appeared as if the majority of the drivers were on their way to or from market. The farmers were busy in the fields, leaving wives or daughters to do most of the necessary running to town.

State Control of Eggs.

An example of German methods of securing food is seen in the new regulations of the Bavarian Egg Supply Office. Poultry keepers are required to deliver to the Government 40 eggs for each hen kept. The 1918 quota is due in September at a fixed price of 4c per egg—Egg Reporter.

SCORN TO WEAR CHEVRONS.

They Say "Safety Firsts" Have a Similar Privilege.

The Canadian Associated Press understands that an effort will be made while Gen. McBurn is in England to enlist his co-operation with Sir Edward Kemp in attempting to secure from the British War Office a better regulation regarding the wearing of chevrons. Briefly, the present regulation is that members of any branch of the forces, Imperial or Dominion, are entitled to chevrons for service overseas. In the Dominion troops a special provision was made that serves overseas should count from the date of their leaving their own country. This means that Canadians who have only done service in England are entitled to the same mark of distinction as those who spent whole winters in the trenches.

There are many Canadians in England, of course, who have got no further to the actual fighting through no fault of their own, but the following is a glaring example of the present anomalous position: At Argyll House, in London, at this moment there is a certain major wearing one red and three blue chevrons, also the order of the British Empire and a Russian decoration, and yet he has spent his whole time at clerical work in England.

There is also a young captain who came over as a private, was wounded three times, earned his Military Cross in France, and yet, following the example of Gen. Turner and others, declines to wear a single chevron on his sleeve.

A recent letter from the War Office admitted that "some men of ours, no less than yours, earn chevrons very cheaply. For instance, all those officers in overseas positions at the beginning of the war are entitled to chevrons, although they may never have been moved since, and officers of the Indian army on duty in London are similarly entitled."

Catching Up to Us.

The New York Commercial states that the United States is second to Canada in supplying farm machinery to Australia and its position in the trade is steadily improving. Eleven million dollars' worth of such machinery is required annually by Australian farmers, of which seven million dollars' worth is manufactured at home and four million dollars' worth imported.

While the present demand for farm machinery is substantial the fact is that the normal course of events in Australia is destined to become a much more attractive market for such articles. The increasing efficiency of farm tractors should eventually prove a most important factor in developing the agricultural resources of the country. In spite of the present difficulties in the path of the average American manufacturer, the market deserves the utmost attention, especially on the part of those who produce a fair number of the machines most favored by the Australian farmer.

The home manufacturers are favored by the fact that much of the land is not cleared of stumps, so that a stump-jump feature is a necessity in most implements. Canadian and American manufacturers have never been obliged to specialize in such a feature, whereas the Australian manufacturer has given it attention for years. This and other disadvantages and advantages are discussed at length in an American Government report for the benefit of manufacturers and exporters who are planning to extend their Australian and New Zealand trade as soon as normal conditions are restored.

Facing Vast Army.

Few Canadians are alive to the fact that they are menaced by an army greater than that which is menacing Europe at present, writes a Judge contributor. All over the country it is springing up, in the fields, in the cities, at the seashore. Its members require no training, they are perfect in their art from birth. They have no flag and no leader. They are camouflaged with no baggage trains and have no lines of communication to keep open. Being ignorant of death, they do not fear it and the most frightful slaughter does not dismay them. With lightning rapidity, they move from place to place, so that they seem to be everywhere. There are no slackers in this army. Each member is firmly alive to the necessity of doing his bit. Like the leaves of the tree, of the stars of the Milky Way, they are innumerable. Swiftly, silently they have arrived at our very gates. The mosquito is here.

Canada's Ace.

One of the books receiving wide-spread notice at the moment is Major Bishop's work on his exploits as a famous flying man. Not that the young Canadian soldier, V.C., D.S.O., and M.C., refers to himself in such flattering terms. He merely tells with breezy enthusiasm and cheerfulness what his experiences have been, and incidentally one learns how he received them.

Farewell to Historic Home.

Sarnia urgently needs a society to inculcate appreciation of the value of historic landmarks, as evidenced by the fact that the old Mackenzie home is now being torn down. It has been inseparably identified with the early history of Lambton County since the days of Hon. Alexander Mackenzie's premiership.

Cisain Band Is Nuisance.

Declaring that the health of their children is adversely affected by the practicing and playing of the Highland Cadets' brass band at Lord Roberts' School, Vancouver, ratepayers are asking that the Board of Education suppress the band.

Pioneer Family Among Heirs.

The family of the late George Wishart Gardiner, one of the pioneers of Edmonton, are among the heirs, with Colin Campbell Robertson-Glasgow, Field Marshal Sir Douglas Haig and other notables, to the great Gardiner estate in Scotland.

GIRLS! BEAUTIFY YOUR HAIR AND STOP DANDRUFF

Hair Becomes Charming, Wavy, Lustrous and Thick in Few Moments.

Every Bit of Dandruff Disappears And Hair Stops Coming Out.

For a few cents you can save your hair. In less than ten minutes you can double its beauty. Your hair becomes light, wavy, fluffy, abundant and appears as soft, lustrous and charming as a young girl's after applying some Danderine. Also try this—moisten a cloth with a little Danderine and carefully draw it through your hair, taking one small strand at a time. This will cleanse the hair of dust, dirt or excessive oil, and in just a few moments you have doubled the beauty of your hair. A delightful surprise awaits those whose hair has been neglected or is scraggy, faded, dry, brittle or thin. Besides beautifying the hair, Danderine dissolves every particle of dandruff; cleanses, purifies and invigorates the scalp, forever stopping itching and falling hair, but what will please you most will be after a few weeks' use when you see new hair—fine and downy at first—yet—really new hair growing all over the scalp. If you care for pretty, soft hair, and lots of it, surely get a small bottle of Knowlton's Danderine from any drug store or toilet counter and just try it.

Catch Fish; Win the War

THERE is no reason to doubt that Omar had a fishing excursion in mind when he said, "O, wilderness were Paradise now." Likely he was on his way to a favorite nook for bass. Coming back, pessimism might have crept into the verse as into most of the quatrains. Moreover, all that we know about Paradise we imagine. There is no experience, since from that bourne no traveller has returned. When one does make his way back we shall be in a position to give a proper definition of Paradise. Until then it must remain something to which one looks forward with keen pleasure. In this sense there need be no hesitation in saying that the ideal combination of wilderness and Paradise is just about a hundred miles north of Toronto. The jumping-off place is Penetang; the Open Sesame is "bat," the treasure to be unlocked is fish. The final result is a chastening and strengthening of character.

From Penetang north and west through the Georgian Bay and its 80,000 islands—count them—80,000—The Voice of the Red Gods roars, and it is there that the young men's feet are turning to tramp on the tail of the black bass, the green bass, and the more tenor pickerel and pike and the baritone lunge. All these fish taste much alike, but they are valued by anglers in proportion to their reluctance to be dragged into the boat and submit to a bump on the beach. Thus the black bass, though smaller than the green, is more highly esteemed, for when a black bass swallows the bait the impression of the person on the other end of the line is that a bull terrier has suddenly taken hold, and fears for his own life mingle with hope that he may survive to leave a record of the encounter and show up Homer. The pike, too, is larger than either of the bass, but is of a more pessimistic disposition, being inclined to murmur "kismet" when he is hooked, instead of upsetting the boat and swallowing the occupants as seems to be the ambition of the maskinonge.

North of Penetang the waters swarm with fish, not only the varieties mentioned, but with perch, sunfish, rock bass, minnows and other members of what a poetical writer might call the "finny tribe." They would constitute a satisfactory solution of our food problem if they could be freely translated from the water to the frying-pan or the air-proof tin. They are, however, mysterious and irregular in their habits, and only long and patient study will enable the fisherman to so win their confidence that he can count on being able to sit down at the end of the day and eat a satisfying meal of them. Their office hours are not to be found even in the guide books, nor can their habits be tabulated as was the case of human beings in the mediaeval ages before the Committee of One Hundred rolled the Stream and converted patrons of the back room into patrons of the back lane and adjacent purlieu.

The general principle adopted by fishermen is that the further away you get from camp, and the more trouble you have in getting there, the better is the fishing. What foundation in fact there is for this belief is not easy to say. Sometimes it seems to be invalidated, for it has been known that a party camping five miles from civilization paddled ten miles further into the wilderness and got back with not more than a few dozen fish, none of them more than five or six pounds, while another party lodged on the brink of civilization, paddled five miles up to the wharf of the campers first mentioned and took fish of a number and size that caused bad blood between the two parties of fishermen. The same principle may be observed locally, for one can get more fish on King street east in half an hour than he can get in Lake Ontario in half a year.

But an injustice would be done to fishermen if the impression were conveyed that what they desired was merely to eat a lot of fish. It is the sport of catching them that makes the appeal. Hence the thread-like lines, the willow rods, the dainty little hooks. Hence also the apt-mimic practice of throwing back every fish not more than one and three-quarter inches long that accidentally impales itself upon the barb. If one merely wanted to glut a carnal appetite upon fish he would buy a can of salmon. Instead of which the true fisherman does not eat the canned salmon until all his other supplies of bacon and eggs and beef have run short. In fact, the true fisherman does not renege if he fails to catch any fish at all. He realizes that his apparent failure is not due to any negligence on his own part at all, but rather to the fact who fail to keep the rendezvous, and to the rather low order of intelligence that prevails among them. He establishes himself in a shady place and submits his worms, wriggling with anticipatory rapture, to the inspection of the underworld. If the real fish do not bite, there are others that will. The little chips will obligingly eat the worm and make ball fellows of themselves. At any rate there is a likelihood of a further up.—J. V. McAree, in the Mail and Empire.

WAR PUZZLES

GERMAN SUBMARINE U-53
Sunk six steamships off Nantucket Island, two years ago today, October 8, 1916.

Find a sea captain.

YESTERDAY'S ANSWER
Upside down above gun.

Will Not Build.
Perth, Oct. 7.—Perth will not have a curling rink this winter. A meeting of those interested in curling was held last week when the project of building a new rink was discussed. It was decided that the money could not be raised this year and there did not seem to be any building that could be used temporarily. It was suggested that they might return to the primitive way of curling and make a rink on the river and this may be done.

When a girl says nobody understands her the chances are everybody understands her.

Your Labor Counts—every ounce of work you do helps some soldier who is fighting over there! This war is being fought as truly in the household and in the work-shop as it is in the trenches.

Some of our Canadian women are borne down physically and mentally, by the weakness of their sex. They suffer from backache, dragging sensation, very nervous and pain in top of head. If they ask their neighbors they will be told to take a Favorite Prescription of Dr. Pierce's which has been so well and favorably known for the past half century.

Weak women should try it now. Don't wait! Begin today. This woman's tonic and nerve will bring vim, vigor and vitality. Send Dr. V. M. Pierce, Buffalo, N. Y., 10c for trial pkg., tablets.

Woman's Right in Gait.

The evolution of the new woman was illustrated in Galt a few evenings ago when two factory girls quarrelling over a domestic issue, proceeded to adjust their differences by a rough-and-tumble fight on the public street.

Big Find of Natural Gas.

Prospecting for natural gas has been crowned with success at Hepworth, near Owen Sound, a considerable deposit having been tapped by a 6-inch pipe at 1,115 feet.

FIRE PREVENTION

EXTRACTS FROM

PROCLAMATION

Issued by His Honour the Lieutenant-Governor of the Province of Ontario.

Whereas next to the care of those who are offering their lives on the front line of battle, the conservation of all our energies and substance is our most important problem;

And whereas the saving of human life, thrift, and the prevention of loss of property through destruction by fire, is an aid which everyone should give willingly to the community at large;

And whereas the reckless and impoverishing fire waste that confronts the people of our Province is appalling;

Therefore, believing that the loss can be minimized only by awakening in the public mind a universal watchfulness against carelessness, accumulation of rubbish and unsanitary conditions;

Because of this great need and in order to arouse a sense of personal responsibility in reducing the number of preventable fires;

We have thought fit, by and with the advice of our Executive Council for our Province of Ontario, to cause, and do hereby cause Wednesday, the

9th DAY OF OCTOBER, 1918

FIRE PREVENTION DAY

And We do hereby urge that on this day, throughout our Province of Ontario, attention be called in schools and public places to the conditions that exist and to the need of immediate action and co-operation on the part of everyone; and special exercises, addresses and other means be employed to impress on the public mind the

To insure the success of this great Clean-up Campaign it will be necessary to have the hearty and harmonious co-operation of all persons who have for their objects civic, social and industrial betterment.

The Proclamation should be read in all Schools and at Public Gatherings.

Office of the Fire Marshal of Ontario, Department of the Attorney-General, Toronto, Sept. 21st, 1918.

GEORGE F. LEWIS, Deputy Fire Marshal.
