How to Detect Disease and the Measures of Control.

Spraying to Be Effective Must Be Done at Exact Time - Have Everything In Readiness When Season Opens - Write Department of Agriculture for Up-to-Date Spray Calendar.

(Contributed by Ontario Department of Agriculture, Toronto.)

HE symptoms of hog cholera differ somewhat according to the virulence of the virus and the resisting power of the hogs in any particular outbreak. Owing to this variation, two forms of the disease are recognizedthe so-called acute form and the chronic forms.

In the acute or severe form, the hogs sicken and die quickly, appearing to be well one day and frequently dead the next. In the chronic or less severe form, the hogs may be sick for weeks before they die or get

When cholera enters a herd, the hogs do not all become sick at once. One or two fail to come for their feed and will be found lying down in some dark corner. On being raise up their backs will be arched, and they will shiver as with cold. They soon become thin and tucked up in An extremely accurate device has the flank and stagger around when been invented for measuring the trying to walk, the hind legs being distance automobile wheels may be particularly weak. The eyes become inflamed and show a whitish discharge, sometimes causing the lids to tion is noticed at first, followed by perature of the sick hogs will rise to Mrs. B. Lake, here. Mr. and Mrs. The Uruguayan government is as high as 107 degrees F. or even E. Webster, Oso, were recent visitors planning the construction of a dry- higher, the normal temperature of

Methods of Spreading.

So far as known, the virus of hog cholera will not propagate outside the body of the hog. As already stated, the virus is given off in large quantities in the urine and faecal discharges of sick hogs. Anything that gets contaminated with these discharges is liable to spread the disease to healthy hogs that come in contact with it. Consequently; boxes, of their niece at Maryville last Ceylon has opened a sugar re- wagons, and cars in which sick aniand yards in which sick animals have anyone walking over the same get and may carry the disease to other herds subsequently visited.

Prevention and Treatment.

From what has been said above regarding the way the disease is spread, it will at once be seen that surrounded by a tape to show the one way to keep the disease from a healthy herd is to take all steps necessary to prevent materials contaminated by sick hogs from coming in contact with the healthy herd.

In Canada (by order of the Veterinary Director-General)-If by any chance the disease gains entrance to ary points uses the wheels and a herd anywhere in Canada, the laws axles of cars and the regular rails. of the Dominion require that a veter-That he has obtained an off inary inspector be notified without equal to coccanut oil from low or- delay.
