X-RAY FAILED Mechanic Gives Evidence

There are cases where science in its most profound phases is absolutely balked, yet other help is at hand. This is proved by the testimony of a mechanic 35 years of age, who suffered, at times, positive torture from stones in the bladder. After trying many remedies without result, he had an X-Ray photograph taken, which also failed to show where the trouble was. Fortunately, just at this juncture, when he almost had given up hope of any relief, Gin Pills were brought to his notice. These famous Pills in a very short time enabled him to pass the stone which was the cause of his trouble. We will give the name of this man on request.

Kidney and Bladder troubles should not be neglected. The first symptoms should be sufficient warning. Pain in the sides or back, constant headaches, neuralgic and sciatic pains, rheumatism, dizziness, constipation, gravel, highly-colored urine, specks before the eyes, all point to derangement. Gin Pills should be obtained without delay. Druggists and dealers carry them—50c—your money refunded if not satisfied. Free sample on request.

BEWARE OF TENDER, INFLAMED GUMS

Pyrroha, with a premature loss of teeth, is almost inevitable if you do not properly care for your gums. Here is the explanation: As you age, the body tissues naturally relax. You see this tissue loosening in the neck. It goes on in your gums, too. As you grow older, your gums shrink below the normal gum line. Through lack of care they become spongy and inflamed. Then you have Pyrroha (Riggs' Disease). Four out of five people over forty have Pyrroha. And many under forty, also. Don't let a tender gum spot develop. These tender spots breed disease germs which enter the system through tiny openings—infected joints or tonsils—or causing other ailments. Immediately get Forhan's, which positively prevents Pyrroha if used in time and used consistently. Forhan's tones the gums and hardens them. They in turn keep the teeth healthy. Brush your teeth with Forhan's. It cleans them scientifically—keeps them white and clean. If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment. 35c and 60c tubes. All Druggists. FORHAN'S, LTD., Montreal.

FORHAN'S FOR THE GUMS

THE PRINCE IN THE NORTH COUNTRY

It's safe to say His Royal Highness has not often been "snapped" in either the position or surroundings of this picture. The north is not conventional, and the unconventional is the commonplace there. But the people along the Nipigon may never again have the opportunity of seeing the heir to the British Throne as they saw him in September.—Photograph by courtesy Canadian National Railways.

"MOUNTAIN OF GOLD" A Standard

It Would Lessen the Value of Gold Standard. The nearest approach, literally, to a "mountain of gold" is Mount Morgan, in Australia. And they are only thirty years old. They have produced \$38,000,000. This so-called "mountain of gold" has yielded, on an average, half an ounce or less of gold to the ton. This has led many persons to ask seriously, "What would happen if a mountain of pure gold were found?" For ages men have dreamed and writers have written yards about "mountains of gold," but just what would happen if one were found is still a question with as many sides as a quartz nugget of the precious yellow stuff. That it would lessen the value of the gold standard goes without saying, and yet some other rare metal or substance would undoubtedly be found readily enough to take its place in coinage if this should happen. Concerning this interesting question, mining experts have talked most interestingly. Those of us, they say, who are familiar with gold mining, and more especially, the big bonanzas of the world, need not strain our imaginations to conceive of an ore body or even a mass of gold big enough to upset international monetary standards. Many a prospector trying his bacon at a camp fire and stimulated by a concentrated cup of coffee must have seen visions of a golden mountain or a streak of pure gold that ran across creation as if it would never stop. Every now and then we hear of fabulous mineral discoveries, like that of Bitter Creek, in June, 1910, and when the irresponsible scribe of the Daily Scream has exhausted his vocabulary he usually ends by talking about a "mountain of gold." When the stampee to the Australian diggings was at its height in 1852, the ignorant emigrants, having heard that gold was found in quartz and not knowing that pervasive mineral, supposed it was "quartz," and hence expected to gather the gold in pits and pans. This fact is vouched for by F. J. Dunn, the Australian geologist, who as a boy went to the diggings at that time. And why not? We may laugh at simpleton from the farm, and we may sneer (and we do) at the perfervid scribbler of the untechnical paper, but it is doubtful whether even that peripatetic philosopher known as the man in the street could give adequate reasons for the improbability of such a golden discovery. For instance, what is the biggest mass of native copper ever found? Of course, it was in the Lake Superior region. It was in 1857, in the Ontonagon district. At a shallow depth there was discovered a mass of copper 46 feet long, with a maximum thickness of 8 1/2 feet. The mean width was 12 1/2 feet, and the mean thickness four feet. The total weight actually recovered was 420 tons. No such masses of gold as this, of course, have ever come to light. Yet gold in great quantities has been won in brief periods. California river beds yielded \$81,294,700 in 1851 alone, and the shallow diggings of Victoria gave \$65,000,000 in 1853. In the Klondike more recently one miner cleaned up \$46,000 in eight hours and took out \$750,000 from a claim about 80 x 50 feet. Much of this gold was in coarse pellets and nodules, and yet the largest nugget ever found was picked up near Dunolly, Victoria, Australia, in 1869, and weighed 190 pounds. Another weighing 184 pounds and including some quartz brought in nearly \$42,000. There have been others nearly as big, yet this is very far from masses such as the huge copper nugget above described, and farther still from a "quarry" or "mountain" of gold. The nearest approach to this as yet imaginary possibility seems to be Mount Morgan, in Queensland, Australia, a hill about 500 feet high, the crest of which was a "gossan" containing several ounces of gold per ton. This has been excavated in successful benches, so that it approximates to the "quarries" of gold mentioned by certain writers. But the workings are now far below the foot of the hill. However, they have yielded a quantity of gold so great as to render Mount Morgan unique in the history of mining. Since its discovery in 1886, according to the latest figures available, this ore deposit has yielded in excess of 3,500,000 ounces of gold worth \$73,000,000, besides 33,000 tons of copper. The company owning the mine has distributed more than \$37,500,000.

On Ice Floe Five Months.

Scientific data of considerable value were obtained by a party of fifteen men who returned to civilization recently after spending about five months on a drifting ice floe in the Arctic Ocean, according to Popular Mechanics Magazine. Special attention was given to the study of currents in Beaufort Sea, that part of the ocean which stretches north of Alaska and Canada as far as Banks Land, and numerous soundings were made in the cold waters. The floe on which the strange voyage was made was seven miles wide and fifteen miles long. Many seals, polar bears, ducks and land birds made their homes on the floating block of ice.

St. Catharines' Population.

The population of St. Catharines, Ont., is nineteen thousand, one hundred and ninety-five, an increase of six over last year. The large number of foreigners who went back to their native land after the war, is given as the reason for the small increase, the smallest on record. The assessment of the city is sixteen million and forty-three thousand, an increase of a little over half a million. Income tax assessment decreased two hundred and ninety thousand.

A group of charmers of the famous Peacock Alley chorus in "The Kiss Burglar" at the Grand Opera House on Wednesday, Oct. 22nd, bargain matinee and night.

Watch Teeth Whiten When You Remove the Film

All Statements Approved by High Dental Authorities

Free A Ten-Day Tube of Pepsodent to show you its effects. Send the coupon for it.

Look in 10 Days See how clean the teeth look—how they glisten. Then you will know what film removal means.

PEPSODENT CANADA The New-Day Dentifrice A Scientific Product. Sold by Druggists Everywhere. Ten-Day Tube Free THE PEPSODENT CO. 1201 S. Wabash Ave., Chicago, Ill. Mail 10-Day Tube of Pepsodent to

This is to urge a ten-day test of a tooth paste which combats the film. High authorities have proved it. Five years of tests have placed it beyond question. Leading dentists everywhere are urging its adoption. Compare the results with your old methods, and let your own teeth decide. Film Destroys Teeth That slimy film which you feel on your teeth causes most tooth troubles. Every modern dentist knows that. Dental science, for many years, has sought a way to end it. That film is what discolors, not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So the major object in cleaning teeth is to keep them free from film. Old-time methods fail to do that. Teeth still discolor, still decay, as millions of people know. The reason is that brushing does not end the film. The film is clinging. It gets between the teeth, enters crevices and stays. Day and night, month after month, it is a potential source of danger. Now a Way to End It Science now has found a way to end it. Five years of tests have proved this. The way is now embodied in a dentifrice called Pepsodent. And we urge you to see what it does. Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly combat it. But pepsin must be activated, and the usual method is an acid harmful to the teeth. So pepsin long seemed barred. But science has now found a harmless activating method. It is made use of in Pepsodent. Now millions of teeth are daily cleaned as they never were before. Try the method ten days on yours. Send this coupon for a 10-Day Tube. Use like any tooth paste. Note how clean your teeth feel after using. Mark the absence of the slimy film. See how the teeth whiten as the fixed film disappears. Watch the results for a few days. Read in our book how they come about. Then decide for yourself what tooth paste you and yours should use. Cut out the coupon now.

MAROONED IN NORTHERN ONTARIO WOODS. Capt. and Mrs. W. N. Furey, who both saw service, while on honeymoon trip by canoe in Northern woods, were storm stayed on an island for three days and nights without food or shelter.

Through foolishness many are put out of the business diamond before they reach the first base. Better not indulge in day dreams if they interfere to any extent with legitimate business interests. We ask the Lord to forgive our enemies in our petitions, and then by actions crucify them. What you might term a reasonable doubt may seem unreasonable to the other fellow.
