

SPECIAL FOR SATURDAY

QUICK'S WESTERN MEAT MARKET 112 CLERGY STREET

Famous Wash Heals Skin

D.D.D., the greatest of skin remedies will remove those skin afflictions that have made your life a burden.

D.D.D. The Liquid Wash

WHEN YOU WAKE UP DRINK GLASS OF HOT WATER

Wash Poisons and Toxins From System Before Putting Food Into Stomach.

Wash yourself on the inside before breakfast like you do on the outside. This is vastly more important because the skin pores do not absorb impurities into the blood, causing illness, while the bowel pores do.

A splendid health measure is to drink, before breakfast, each day, a glass of hot water with a teaspoonful of limestone phosphate in it, which is a harmless way to wash those poisons from the stomach, liver, kidneys and bowels; thus cleansing, sweetening and freshening the alimentary canal before eating more food.

AWAY WITH THOSE ACHES AND PAINS

Keep Sloan's Lintment Handy to Put the "Feel Good" Back Into the System.

It needs just one trial—a little applied without rubbing, for it penetrates—to convince you of its merit in relieving sciatica, lumbago, neuralgia, pains, aches and strains, the after-effects of exposure.

The congestion is scattered, promptly, cleanly, without effort, economically. You become a regular user of Sloan's Lintment, adding your enthusiasm to that of its many thousands of other friends the world over, who keep it handy. Made in Canada. Three sizes at all drug stores—36c., 70c., \$1.40.

Sloan's Lintment Keep it handy

Easy to Make This Pine Cough Remedy

Thousands of families swear by its prompt results. Inexpensive.

You know that pine is used in nearly all prescriptions and remedies for coughs. The reason is that pine contains several peculiar elements that have a remarkable effect in soothing and healing the membranes of the throat and chest. Pine is famous for this purpose.

Pine cough syrups are combinations of pine and syrup. The "syrup" part is usually plain sugar syrup. To make the best pine cough remedy that money can buy, put 2½ ounces of Pine (50 cents worth) in a 16-oz. bottle, and fill up with home-made sugar syrup. Or you can use clarified molasses, honey, or corn syrup, instead of sugar syrup. Either way, you make it easier—more than you can buy ready-made for \$2.50. It is pure, good and very pleasant—children take it eagerly.

You can feel this take hold of a cough or cold in a way that means business. The cough may be dry, hoarse and tight, or may be persistently loose from the formation of phlegm. The cause is the same—irritated membranes—and this Pine and Syrup combination will stop it—usually in 24 hours or less. Splendid, too, for bronchial asthma, hoarseness, or any ordinary throat ailment.

Pine is a highly concentrated compound of genuine Norway pine extract, and is famous the world over for its prompt effect upon coughs.

Beware of substitutes. Ask your druggist for "3½ ounces of Pine" with directions, and don't accept anything else. Guaranteed to give absolute satisfaction or money refunded. The Pine Co., Toronto, Ont.

FIRST YEAR

WHAT BOYS CAN BE

Government Service BY R. S. ALKANDER How would you like to work for Uncle Sam?

Did you know that your Uncle is the largest employer in the world? He hires under Civil Service rules more than 3,000,000 persons. The U. S. Civil Service Commission says that probably no occupation exists which is not in the Civil Service. About 40,000 persons are appointed to positions each year.

Jobs are awarded in civil service by examination. A new position is to be filled. An examination is held taking in the information and qualities necessary to that job. The appointment is made from among the persons receiving the highest grade in that examination. If you are the best man for the job the chances are that you will get it.

Because you start in at a small salary doesn't mean that you will stay there. Large numbers of cases are on record where men have entered the service in jobs paying \$1,000 or less and in a number of years by work and study have gained four, five, or six thousand dollars a year. If you have the stuff in you, you will get up.

Most of the work in the government service is on an eight hour basis. That means that eight hours is the longest time you would have to work in a day. Four hours might be shorter. This would give you the spare time to do any outside studying you might like or to fit yourself for promotion within the service.

The training necessary for you to enter the service is about the same as would be required in the same job in civil life.

If your town has a house to house mail delivery you will find the office of the local board of Civil Service Examiners in the post office. They will be able to give you more information about the possibilities of the service and how to train for the job you want to get.

You might also write to the United States Civil Service Commission, Washington, D. C., for the same information. The Commission would be able to send you bulletins on the subject which would be of value to you.

When you are deciding for whom to work don't forget your Uncle Sam.

(Next week: "Stock Raiser," Boys and Girls Newspaper Service Copyright, 1919, by J. H. Miller)

Newest Notes Of Science

Clamps on the back of a new chair stretch the wrinkles from trousers.

Recent official figures give the population of Australia as 5,030,000.

A Virginia man has patented a machine for sharpening and polishing worn phonograph needles.

British factories make about 5,000 tons of margarine, according to a government formula, weekly.

A brush with metal spikes for bristles has been invented by a Massachusetts man for scaling fish.

In an experimental way passenger aeroplane service has been established between Venice and Milan.

Handled by two men, a new electrically operated machine will apply 350 square feet of stucco an hour.

EDUCATION IN MANITOBA

The Whig has received from the Ministry of Education for the province of Manitoba a very interesting booklet dealing with education amongst non-Canadians.

In Manitoba there is a very large population of children of foreign birth and origin, such as Ruthenians, Galicians and other nationalities, and the problem of their education is a heavy one. In this booklet are a number of articles written by the teachers in these settlements, telling of their experiences and of the difficulties confronting them, and how they overcome them. One teacher tells of the terrible conditions of living in these communities, and of how she has made the schoolhouse a centre for community training.

Community gatherings are held, and at these meetings, the ideals of British law and democracy are instilled in the minds of the foreigners, as well as simple rules of sanitary and proper living. The effect of these meetings has been greatly felt in the raising of standards.

Another teacher tells of a novel plan for teaching the English language to the children of foreign birth and extraction. She has a Victrola on which she daily plays several records of the children can learn the language. This has been so successful that a school yell has been developed, as follows: "Who are we? Who are we? We're the Canadians, don't you see? Can we speak English? Well, I guess I can!"

Do we love Canada? Yes! Yes! Yes! Another article deals with the influence of the returned soldier as a school teacher, and tells of a Ruthenian school which is taught by a veteran who is doing splendid work in educating these children in the ideals for which he fought.

An interesting article tells of a business-man's experience in organizing boys' and girls' clubs in the same district. Plans for a teacher's cottage are shown in the local paper, this being a feature which is really a necessity in the foreign settlements. The booklet is one of great interest to teachers, and a copy may be obtained by writing to Hon. Dr. R. S. Thornton, Minister of Education, Winnipeg, Man.

The Collegiate Girl Guides. Some of the teachers at the Collegiate have taken up enthusiastically the girl guide movement, and on Thursday afternoon a gathering of the school children took place with a view to forming a corps of Girl Guides at the institute. The girls themselves are very much pleased with the idea, and practically every girl in the school intends to join.

Mrs. Gill, who recently returned from England where her daughter was a member of a corps of guides, speaks very highly of the movement, and has written to the proper quarters for information as to organization. As soon as this is received the local corps will be formed, and will be a splendid feature of the social life of the Collegiate.

Next Week's School News

The next issue of the School British Whig will see the commencement of the children's own newspaper or magazine. The children themselves will be the reporters and contributors. The teachers and principals have arranged for their scholars to

the inside and outside of a user's teeth at the same time.

French road builders have developed an exceedingly durable highway by using a concrete made of iron shavings, cement and sand.

The world's consumption of cocoa has trebled since 1918, about one-half of that is produced, being used in all the United States.

High speed telegraph apparatus of English invention can be made to deliver typewritten messages at a speed of 120 words a minute.

For farmers a motor truck has been invented that loads, hauls and scatters fertilizer, using the same power for all three operations.

A process has been invented in Europe for cutting thin plates of marble by diffusing electric lights more effectively than frosted glass.

A new fly swatter is a cone of wire that is shot out from a pistol by a spring, its shape making the escape of an insect almost impossible.

Spain has established an electrical school at Barcelona in connection with schools of the textile, dyeing, chemical and tanning industries.

Spring wire guards for hook and hair to keep them clear of weeds yet not interfere with fish, being invented as a boon for anglers.

Of British invention are ground plates to be dragged in the sea by cables from aeroplanes to facilitate radio communication between aviators.

A chalk line invented by a Japanese resident of Nebraska is enclosed in a case resembling a shoe and is not chalked by being drawn out of the toe.

A Frenchman is the inventor of a revolving fan small enough to be carried in a pocket and operated by pressing buttons with a thumb and fingers.

A recently invented dish washing machine can be attached to a faucet and used with dishes placed in a kitchen sink without employing a dish pan.

For testing the dangers of mine gases an Englishman has invented an apparatus that photographically measures the duration of flashes of explosions.

Electric hot plates have been invented to warm the feet of men on watch on all passenger vessels of 300 or more tons that compasses are not affected.

WHAT GIRLS CAN BE

write stories, news items and other features of interest, which will appear in this column.

This is something entirely new for Kingston, and children will find this news in the Whig only. The commencement of this feature is being eagerly watched for by the school children all over the city, and the Whig is determined to make it the most interesting children's feature found in any paper. The excellence of the idea has drawn forth favorable comment from all sides, and even from the United States, so that the children will no doubt put forth every effort to make their own newspaper interesting and lively.

To the Teachers of Rural Schools. As has been announced at various times during the present week, the children of the city schools are to participate in the making of a school newspaper. This was done by the co-operation of the principals and teachers, by means of a personal call to each school. It was, of course, impossible to call on any of the rural schools with a similar request, but nevertheless, any contribution in the way of stories or news items of the rural schools, will be welcomed. Any stories written by the children, or any items from the teachers, should be addressed to the School Editor, British Whig, who will see that they are given a place in the school children's own newspaper.

The Catewaqui School Auditorium. Another splendid feature in the plans for the new Catewaqui school is the inclusion of an auditorium. This large hall will be of great use to the staff and scholars in promoting the ideals of citizenship and the community spirit, for in it will be held gatherings of the scholars at which these ideals will be put before them. To the whole community the hall should be of great use, as it will probably be available for meetings of various kinds. For this purpose it will fill a long-felt want in the city.

The History of Kingston. How much do the school children of Kingston know of the historical associations of the city of Kingston and of the part it played in the early history of Canada? This question should produce several fine stories for the School British Whig, and will give the scholars fine scope for writing of the early days of their native city.

Satisfaction. If I can let into some soul a little light, If I some pathway dark and drear can render bright, If I to one in gloom can show the sunny side, Though no reward I win, I shall be satisfied.

The new Catewaqui school will have accommodation for at least 450 pupils, and will to a large extent relieve the congestion in the Kingston schools. Even with this extra accommodation, however, there will hardly be ample room for the future needs of the city.

In the children's section of the nineteenth anniversary number of the Christian Guardian a number of poems and stories written in 1830 are reproduced, so as to make a comparison between the poetry and stories of children of today and that of ninety years ago.

Our high school girls are writing to the United States Department of Education in Washington for bulletins telling of investigations made by the big state universities. A number of the girls are specializing in chemistry and domestic science. They intend to study dietetics in a state university or special school.

(Next week: "Industrial Welfare Worker," Boys and Girls Newspaper Service Copyright, 1919, by J. H. Miller)

of which is waterproofed and can be turned upwards to protect a wearer's head from rain.

A projections horn shaped shield has been added to the list of automobile headlights.

In beginning a plan for extensive additions to Italy's inadequate telephone system the first new lines to be built will link Rome and the provincial capitals.

An Arkansas inventor has patented an electric headlight to be mounted on a horse's bridle, furnished with current from dry batteries attached to the harness.

An electrically operated machine has been invented by a Canadian, which leads seals for freight cars, express packages and mail bags at a rate of 1,000 an hour.

A novelty in the motor truck line can be steered with both the front and rear wheels, either together or separately, the driver having two steering wheels to use.

An Australian has discovered a method for using the fibre obtained from the bark of a large variety of eucalyptus trees in the manufacture of tents, ropes and bagging.

The heating element in a new electric device for creasing trousers while they are being worn is placed inside their legs to avoid injuring the outside of the fabric.

Aeronautical engineers have formed an institute in London that is planned to become the principal authoritative body for the technique of British commercial aviation.

Its inventor has patented a mirror to be worn on the back of a motorist's hand to help him signal at night by reflecting some of the light from a following car's headlights.

For filling a refrigerator car ice tanks a motor truck has been designed with a body that can be elevated with a load of ice to the level of the top of the car.

British experiments in increasing crops with electricity have been found to have a beneficial effect on the soil, increasing its productivity for a year or more.

It has been figured by a technical engineer that shovelling speed decreases 5 per cent. for each foot of increased distance a shovel's contents are moved.

Substantial deposits of mozanite, used in making gas mantles, have been discovered in Ceylon, Brazil and the United States heretofore having been its chief producers.

An inventor has patented a boot-jack consisting of a single strap formed into two loops, one of which is placed around a boot heel and the other pushed by its user's other foot.

The United States bureau of mines has adopted a number of substances that produce offensive odors to be pumped through the ventilating shafts of mines to warn miners of danger.

Its inventor has patented a straw hat with a pivoted top, the under side

THE MAN ON WATCH

Well, will Hughie be able to keep Christy in order next year?

It is surprising that Coach Williams did not take some of the Queen's "rush" boys to overwhelm the science of the McGill rugby team.

Difficulties: To get Queen's students to attend the university Sunday afternoon services and to get women to stop smoking.

Will some real wise person tell us why women should not smoke if they demand the same rights and privileges as men.

Judging by the prices of some things we eat and wear, the sellers are trying to beat the record of the men with the ten talents who increased it by one hundred fold.

Women's feet are getting larger, according to the shoe man. How could it be otherwise, since the women have gone dance mad? Much dance, much big feet.

"Joe" Hawkey, who is to be the jail governor, was a great wrestler, and any guy who gets nasty up in the West street castle will get badly mauled up if he lips the ex-Kingston township reeve.

Wolfe Island is busy raising new voters. Three male children made their appearance in island homes last week.

According to Ald. Chown, Catewaqui ward has more kids to the square yard than other portions of the city have to the square rod. It certainly deserves a good school.

What chance has this Church Forward Movement of success when everything but religion is practised in the homes and out of it? The movie and the dance are having their forward movement anyway.

Were any Kingston girls who recently visited Montreal surprised at seeing girl clerks smoking cigarettes on their way to and from lunch?

Although the new school tenders were \$8,000 higher than last summer, the city is getting out of pocket. The salaries of new teachers and caretaker, besides coal, etc., will offset the difference in the tender prices.

The Lampman does not blame Ald. Graham for getting the use of a city's concrete machinery wherewith to build a house. Rather he admires the streets' administrator for the way he did the job.

"The Lord will provide," but when you want to get the foundation of a house erected quickly, it is better to help yourself, even to a municipal concrete mixer.

If the bootleggers who have lost their supply of liquor through its seizure by inspectors at eastern towns knew where a good deal of it went, they would have recourse to the law against some men who have stored it in their own cellars. An investigation should be set afoot as to the disposal of liquor seized at Brockville and east of there.
