In the Auto World

WHEEL ALIGNMENT SAVES LIFE OF FRONT TIRES

One of the most frequent causes of excessive tire wear is faulty alignment of the front wheels, which causes them to scrape the tire along the road surface at each revolution. When ever excessive tire wear develops the wheels should be inspected and if necessary they should have owner in aligning he should have the service station do the job. Front wheels are always cambered and gathered; that is they "toe in" in front, making the distance from wheel to wheel in front less than that in the rear.

At the same time the distance between the points of contact with the road is less than the distance between opposite points. These distances vary with the different makes of cars, but usually the gather equals three per cent. of the tire diameter. Thus, with thirty-four inch tire, the wheel will be gathered about one inch. However, the car owner who proposes aligning his wheels should get the exact figure from the manufacturer.

Spring Seat Lubrication.

Many present day cars are fitted with springs mounted on seats that oscillate. These spring seats usually have some means of lubrication, but many car owners never take the trouble simply to turn up the grease cup provided. While it is not necessary to turn the cup each day it is advisable to give this part a little attention now and then. In cantilever suspensions the centre bearing of the spring should be well oiled. Usually this bearing operates upon a small steel shaft, extending out from the frame. In some cases a tube running transversely of the frame is used and either a grease cup or an oil hole will be found.

Cracked Paint Warns Against Vibration.

On many makes of car the windshield is held in place by steel arms, which protrude through the cowl and are fastened on the under side by a nut and lock nut. Sometimes these nuts work loose from vibration, with the result that the shield is allowed to move slightly. The first evidence of this is seen in cracked finish in the vicinity of the windshield supports. In making the necessary periodic inspection for loose nuts on these windshield supports should not be forgotten.

Creeping Rims.

When the shoulders on the steel wheel designed to hold the demountable rim become worn, the rim and its tire will creep on the wheel. Naturally this makes the valve stem project at an acute angle, and if continued long enough may cut it off. If the valve stem is held firmly by means of a cap, the strain falls upon the lower portion of the stem and that part of the inner tube which surrounds it. In this connection it is well to call attention to the need for tightening the rim lugs by degrees. If they are fully tightened one after the other and all the way around the wheel there is apt to be too much space on one side of the wheel and too little on the other. The proper way is to tighten one lug, then the one nearly opposite it, and so on.

Protect The Windshield.

Cold weather places a great strain on the windshield if it is screwed up tight. As a precaution against breakage, it is advisable to unscrew the thumb-nuts on the side of each standard, and then push equally on each side of the metal moulding when opening and closing.

Slipping Belt.

When the leather fan belt develops considerable slippage, though it is reasonably tight, it is very probably because the rough side of the leather is against the pulley surface. The smooth side of the leather has a much greater traction adherence.

Electric Connections.

When the lights flicker, a cause may be a corroded fuse. Electrical connections will corrode. They should be cleaned now and then to maintain efficient service.

Muffler Cleaning.

In cleaning the muffler after the part has been dismantled and the parts cleaned with kerosene, it is well to go over all the holes designed to break up the gas with a sharp punch or fine taper reamer to make sure that these holes have not been reduced in size by accumulations of burned oil or carbon.

Loose Spokes.

Wooden wheels with loose spokes emit a squeaking sound which is intensely distinct when the car is being driven around a corner. Sometimes this looseness may be obviated by replacing one or more spokes, or it may be cured by forcing small wooden wedges between the spokes and the hub. A wheelwright can do the job in a few minutes.

Axle Strain.

The most severe strain that can be placed on the rear axle or driving gear is to try to get out of a mud hole by backing up a little and then plunging forward on low gear.

Keep Spark Advance.

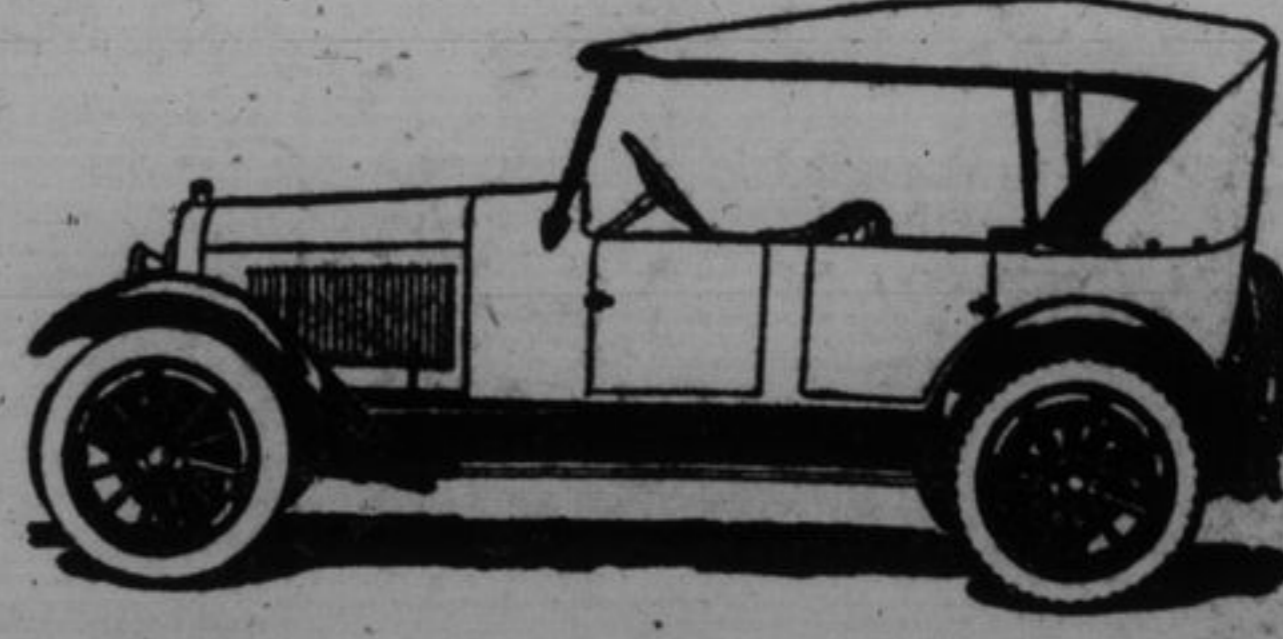

By keeping the spark lever well advanced, much gasoline will be saved. Besides, the advanced spark gives the engine the full benefit of the power stroke and helps the cooling of the engine. Proper grip of the fan belt is as important in winter as in summer. Some motorists even disconnect the belt in cold winter, incurring the possibility of over-heating the engine on a long run.

SCRATCH A TIRE; FIND A BANDIT

Even though you see a perfectly good tire in the light of your headlights on the secluded road ahead of your car, it is not always the wisest plan to stop and get it.

For it may be the bait of a gang of bandits, who will wait until you are out of your car before thrusting a weapon in your face.

Motorists report that the ancient ruse has been revived by highwaymen. If motorists, suspecting a trap, do not stop to investigate, but increase the speed of their cars, the trick will not be played long. And if it is actually a lost tire or other equipment, let it stay there until daylight.

Pre-Heating Principle Widely Endorsed

The Chalmers pre-heating principle is now generally recognized as the greatest improvement in automobile motor design in the past three years.

This principle has now received the endorsement of the United States Bureau of Standards and a committee of the Society of Automotive Engineers.

This wide endorsement is due to the marked improvement in motor performance resulting from pre-heating the fuel.

Chalmers Owners Know These Things

It is endorsed because it assures better combustion of the fuel. Because gasoline consumption is reduced. Because the motor runs more smoothly, accelerates more rapidly, and performs better in every way.

Chalmers owners know these things by personal experience. They know that their cars run better. That fuel bills are less. That replacement and repair bills are lower by many dollars. Now this Chalmers reputation for fine performance is becoming more widespread. The public is finding out what a wonderful value this car is.

Learn These Facts

People to-day are deeply interested in what a car will do. They want definite information on what it will cost to maintain. Chalmers figures are really extraordinary.

We welcome the opportunity to place these facts before you in detail. We believe that if you will study the data available you will understand why the Chalmers to-day is a wonderful motor car value.

CAUSE OF PLEURISY AND PNEUMONIA

Many Cases Develop Through Neglect of Common Colds.

"He started with just a little cold" is a very common statement when people allude to friends who are down with pleurisy or pneumonia. Every reader should bear this in mind and start treating even the commonest cold as soon as it appears.

The placing of Grip-Fix on the market has given every reader the means of conquering even a bad cold in a single night. This saves all the trouble and inconvenience entailed by the cold, as well as guards against the acute diseases which might follow.

Guard your health. Keep a box of Grip-Fix in the house. It is a safe and reliable remedy. In its capsule form it is convenient for taking, and acts more promptly. The ingredients (full list printed on each box) are just what physicians generally use for colds.

On sale by all druggists, 35c. per box.

First, Doctors — Then a Skin Specialist — Then a bottle of D.D.D.

We shall publish every week for the benefit of skin sufferers in this section, a few cases of skin troubles from Canadian people—some of them of the most distressing nature—all treated by the use of D.D.D.—all bearing the name of the author.

A notice or two from a letter from J. W. Coran, 25 Melbourne Ave., Toronto. "I have been a sufferer for two years with eczema on the legs and ankles. I tried three or four different doctors. I used a skin specialist. All of no use. I used a bottle of D.D.D.—that is, I used D.D.D. and I am perfectly well."

If you wish to try a bottle of this Prescription that Mr. Coran found so effective, we will guarantee relief on the first bottle or will return your money back. Send three six pence, 25c. a bottle. Try D.D.D. D.D.D. D.D.D.
