

The Electrical Age Its Significance to Canada

Canada is dependent, not upon coal, but upon her water powers for the development of her industrial life.

No other country can compare with the Dominion as regards possibilities of electrical development for manufacturing. Ranking first among the countries of the world in this respect, she has today less than ten per cent. of her water powers harnessed for industrial uses.

For every horsepower of energy developed there must be supplied the necessary equipment for the utilization of that power, and the immense amount required for future development places the electrical manufacturing industry in Canada in the front rank.

The successful manufacture and installation of electrical machinery and equipment demands years of experience and research, large scale organization and resources.

The English Electric Company of Canada, Limited, combines in the one organization the manufacturing, engineering and construction experience of both the English Electric Company, Limited (of Great Britain), and the Canadian Crocker-Wheeler Company, Limited.

We unreservedly recommend the 8% Cumulative Preference Stock of the English Electric Company of Canada, Limited, carrying a bonus of 40% Common, as one of the strongest investments ever placed before the Canadian public.

Absolute Evidence in Favor of Ground Cylinders

All high grade automobile engines manufactured in this country as well as in Europe have their cylinder bore finished by grinding. Some of the American cars that are mentioned are:

- | | | |
|------------|------------|----------------|
| Apperson | Hudson | Pearless |
| Brewster | Kiesel | Pierce Arrow |
| Cadillac | LaFayette | Rolls Royce |
| Cunningham | Lincoln | Standard |
| Dorris | Locomobile | Stevens Duryea |
| Franklin | Marmont | Stutz |
| Haynes | Merced | Templar |
| Holmes | Packard | Winton |

In fact, 84% of all the manufacturers of pleasure cars use engines with ground cylinder bores, and 91% of the commercial motors are ground. Heald Machines are used exclusively.

Automobile owners have one of these Heald Cylinder Grinding Machines, and can guarantee first class work. Ground Cylinders is a selling point with many cars.

Automotive Grinders

H. M. CAMPBELL,
Corner of Queen and Wellington Streets.

Even the fashion czars occasionally have to bow to vox populi. We see they have decided to allow the short skirts to remain in fashion. Hurrah!

It takes all kinds of people to make a world, so they say, but we never could see of what earthly use a two-faced person can be.

This extension set at your elbow upstairs makes stair climbing unnecessary

Save her many fatiguing miles a year

WHAT more welcome Xmas Gift for your wife or mother than an extension telephone?

The time and strength used in running up and down stairs to answer or make telephone calls can be better employed.

Extension telephones cost less than 4 cents a day. They are a wonderful convenience.

Jack-and-Plug equipment is also a great convenience that is inexpensive. It makes it possible to use your desk telephone from different locations. You can have your instrument downstairs during the day, and upstairs at the bedside at night!

If you order now, we can install an Extension telephone or Jack-and-Plug equipment for Christmas.

NIGHT FLYING.

On the Airways of Europe Being Arranged For.

London, Dec. 7.—Preparations for night flying on the airways of Europe are proceeding rapidly. The French Air Ministry have just decided upon the erection of a new lighthouse that will exceed in candle-power and intensity anything that has yet been attempted either in aerial or marine lighthouses.

Showing a flashing power of one thousand million candles it will be visible from a distance of 200 miles, and will be the guiding light for night air expresses entering or leaving the Paris aerodrome at Le Bourget from the South. The new lighthouse will be erected on Mount Africa, a hill top seven miles from Dijon, rising to a height of 1,500 feet.

On the London airways seven aerial lighthouses are now in operation or on the point of completion. The stretch of airway between the London Air Station at Croydon and the coasted air junction at Lymp is now illuminated by four lighthouses flashing distinctive signals. They are so arranged that an air express pilot proceeding either to or from London and the Continent will always be in sight of one of them which is moored in mid-channel, so that it will act as a guide not only to shipping passing up and down the Channel but also to aeroplanes flying above it.
