HUMOR PLAY WORK

TOYS OF TOOTHPICKS AND PEAS

Half a pint of dried peas and a sides of the wagon are formed by four andful of toothpicks—here's some-short uprights and two long sticks hing I'll het you never tried to make joining them at the top on either side. The cardboard wheels are fastened to

Soak the peas for a day in tepid the wagon with pins, and the hubs are water, which will make them soft and peas. easy to work with. The toothpicks are used to fasten the peas together. You the bed and the chair all by yourself? must be very careful in joining two You can make longer or shorter sticks, peas, because they will split easily. You know, by jaining two toothpicks After the peas have been soaked, on such pea you will find a tiny black spot on one end. This shows the place where the pea will split, and the stick more fun when you invent some for should not be thrust in. Put the stick. yourself. instead, grosswise through the pea, so that when it dries the stick will hold it in such a way that it can't split.

What Can You Make? Now take the peas and toothpicks and see how many different things you dangle over the sides. The expression ean do. Here are a few to start on. has come to be applied to leaving a A barn is easy to make. Use four teaspoon in a cup. When you have toothpicks joined by means of four stirred your coffee, take the spoon out into his office and said his wife had having two peas slipped on in the middle before the joining is done to bold the door supports. Then lay them square on the table, flat, and stick in four sticks upright at the corners to show the barn walls. The ridge pole of the roof is made of a stick the same length as the others, with several peas stuck on. Short sticks of the same length are then stuck in these peas at right angles to the ridge pole, forming a roof. The edges of the roof are formed by long sticks thrust through exactly the same number of peas as were put on the cross pole and fast-ened to the four uprights. The short sticks which formed the roof are then tuck in these peas on the side

How to Build a Wagon A little wagon to go with the barn can be made also, with the help of some cardboard wheels. Two long sticks with four or five peas slipped on are joined by shorter sticks. The ONE REEL YARNS

NEVA'S "JEWELS" Neva and Cynthia, the inseparables, went down town on Saturday afternoon. They were doing some errands for Mrs. Phillips, Neva's mother. The final trip on their list was one to the

five and ten cent store. "Look," laughed Cynthia, "at this wonderful jewelry. Fine big diamonds for only ten cents. Aren't they grand?" Neva came over and looked at the flashing array of rings. "Let's buy a ring aplece," said Cynthia, with dancing eyes, "just for fun. We'll wear them home."

So the two of them leaned earnestly over the jewelry display, and left the store wih a big "diamond" apiece, while Neva had gone further and bought a "diamond studded" necklace. It was not quite time for them to be home, so they went into a confection ery for sodas. They met a couple of equaintances to whom they spoke most politely and gravely having trouble to keep from giggling when they saw the effect their "jewels" had.

When they reached Neva's home, they found a note from Mrs. Phillips saying that she was staying for supper at Aunt Mollie's, and Neva should get her father's supper. Nevs persuaded Cynthia to stay, and the two girls put away their jewels, as they got out aprons and busily started to

The meal was all ready when Mr. Phillips arrived. He looked at Neva searchingly as they sat down. "What have you been up to, Neva?" he asked. "Were you down town today?" He means you mustn't allow them to "Why, yes, father. What do you

been in and had spoken about how my daughter was so overdressed. She said that even if I could afford to buy you expensive jewelry it wasn't good policy to wear it around, especially since we have been complaining about poor business and have been keeping off some of our creditors. I had a hard time convincing him that his wife was mistaken."

Neva's face was very red. She marked on the tablecioth with her spoon while she told him the story of her "jewelry." After suppor there was a "funeral" in the Phillips backyard. little box was carefully buried out by the oak tree.

Keeping Warm By Engine Heat

SO LONG AS A CAR is in operation, a current of air, warmed by passing through the radiator and by contact with the engine and its exhaust pipe, is being swept under the flooring, by the fan, to escape uselessly and it is sad to think of all this heat being blown out into the open air, when it is capable of warming the front compartment, if diverted into it. The motorist who does not care to install a regular car heater—which is the real solution of the "cold feet" problem—and who is willing to tolerate some additional noise and odor, may properly consider utilizing a part of this under-hood heat to warm the body space. Occasionally, in very cold weather one sees a car or truck being driven with one of the front floor boards removed, for the sake of the warmth thus obtained, but this is rather an awkward expedient. The best way in which to conduct engine-heated air into the passenger space will differ with different cars, and the individual motorist can exercise his ingenuity in solving his own particular problem, but in some instances, a grating or register, capable of being opened and closed, set into a space cut out of the vertical dashboard preferably on the exhaust side, will let in a substantial volume of warm air.

HILLS

and allowing it to stand overnight, to remove carbon deposits. Others say that using kerosene in this way washes the oil off the cylinder walls and advise that the kerosene

J. T. H. writes: My car has an advantage. Kerosening through the air-intake has a ly, except in one particular. Once in a great while, when nearing the stems, which the other treatment top of a very long, steep hill, the does not, but as larger quantities of engine has weakened, begun to kerosene are used in this method, backfire and in one case it stopped. the effect on the engine oil is great-

Can you explain this?

Answer: Possibly this is bemental. The pet-cock method is all right as a usual practice, while the cause your vacuum tank has failed to keep filled on these occasions in hard hill climbing, with the throttle wide open, the vacuum in the intake manifold is very slight indeed and may be insufficient to cause gasoline to be drawn from the main tank, so that the vacuum tank may become empty if this sondition continues for a considerable length of time. When next your engine begins to trouble in this way, throw into first speed, and run slowly for a short distance. By thus running the engine throttled for a time, the vacuum will be increased and the tank should fill, permitting you soon to engage the higher gears.

WALVE CLEARANCE

H. M. asks: What is the correct engage the higher gears.

H. M. asks: What is the correct REROSENING CYLINDERS

N. H. writes: Some advise putting a teaspoonful of kerosene into
each cylinder, through its pet-cock -1-64 and 1-32 inch.

RECOVERED

and

REPAIRED

should be put in through the car-

buretor air intake. Which is right?

Answer: Kerosening cylinders through the pet-cocks no doubt does thin the oil on the cylinder walls, but the oil supply is at once renewed as soon as the engine is

started and no harm is done. The

kerosene also washes out gummed

oil from around the piston rings

Questions of general interest to the motorist will be answered by Mr. Olough in this column, space permitting. If an immediate answer to serired, enclose self-addressed, stamped envelope,

HERE'S THE NEWEST! EXTENDING ISLAND

New York refuses to be limited by enything—even the shores of its islands. Now that Manhattan is holding about as many people and build-ings and transportation lines as it can crowd onto its surface, the perfeetly practicable suggestion has been made—and seems likely to go through—to build the Island bigger. Wall street will be the geographical heart of the city as well as its figurative pulse when the tremendous undertaken pulse when the tremendous undertaking shall have been accomplished. The
plan is to add six square miles of
land to the lower end of Manhattan
Island, extending right out into the
harbor, including Governor's Island
in its acreage and bringing Staten
Island as close as Brooklyn now is
Although stupendous in its conception, it has been pronounced a perfectly feasible idea. Walter Russell
is President of the organization
formed for the purpose of effecting
this unprecedented "city extension";
T. Kennard Thomson, engineer; and
Ernest D. Anderson, secretary-treasurer. Each of them expresses himself
as confident that Manhattan Island
will have 8,840 acres more on its surface than nature gave it before many face than nature gave it before many years. "It is not so difficult a job as the building of the Panama Canal," explains Mr. Russell, "and may be considered only second in importance to that achievement."

IN MODERN BAGDAD

Every once in a while a new film production appears which is really worth comment in any news of the myriads of activities which start in New York City and thread their way through the whole country. When there is such a one, I like to mention it—as you probably have noticed. The other day, I saw a film of particular interest and particularly welldone. It is "The Grim Comedian," by Rita Weiman, whom I had always thought of as a short-story writer, but whom I shall hereafter hold in my mind as a dramatist. It is a story of the stage and not of the pleasantest aspects of that behind-the-scenes world. But its handling saves it from being commonplace or sordid. A woman whose theatrical career has led her to receive benefactions from the hand of a wealthy, idling bachelor, faces the shock of seeing her own danghter the recipient of his favors. Phoebe Hunt, Jack Holt, John Harron and Gloria Hope make the characters human and unexaggerated and the director has accomplished the same sort of achievement with the whole drama.

PUT AND TAKE' FROM RELIGIOUS CUSTOMS

The game, "Put and Take," played with a tiny brass top, is more than two thousand years old, and in its present form is the outcome of a curious Jewish religious custom.

The Jews have a game called "Trendel," which is played on the Feast of Dedication. An ivory top is used, having four sides, each inscribed with a Helirew letter. The four letters stand for all, half, nothing and ters stand for all, half, nothing, and add. The game is not played for money, but the winner usually takes

The game was started be lowed to be used for reading o

"Ship your oars," the oarsman says.

AND HERE'S HOW YOU MAKE IT ething the whole family can use

A glance at figure 1 of the diagram will show you how the bracket is used. A long piece of cloth—an old strip of bath towel which has had shoe polishing wax rubbed into it will so is threaded under the two rollers marked P. The shoe is placed beeath the cloth on the base, Z. Take old of the ends of the cloth and pull it

Of course, this polishes only the toe of the shoe. The strip of cloth should be long enough so that the ends may be used for rubbing the back and upper parts of the shoe without making it necessary to remove the cloth from the bracket.

The bracket may be fastened to the door screws which fasten part E to part A. These last holes are also made for screws which fasten part E to part A. These last holes if you wish, a cost of stain or paint should be countersunk, for round bead screws are to be used.

Every one in the family from littie Tommy to Grandfather, likes to have his shoes well shined. Mr. Solar's shoe shine bracket

door of the clothes closet. It will be out of the way and always in a

Lay out the bracket E as shown in the diagram. The cut-out made in the top of this piece receives one of the arms that support the rollers.

The rollers may be planed round ends of the two arms that support the rollers bore holes that are a little larger than the shank of the round head screws that hold the rollers in closet. This is not only a convenient
