FLOWERS FROM SEED THE HORSE AS A MOTOR

Beauty and Fragrance for All at Very Small Cost.

Most Annuals May Be Sown Indoors For an Early Start—A Few Simple Remedies Suggested for Insect and Other Pests—Annuals May Be Transplanted.

(Contributed by Ontario Department of Agriculture, Toronto.)

Among the varieties that should be started early indoors are Petunias, Verbenas, Antirrhinum (Snapdragon), Pentstemon glaziovianus, Salvia, Ageratum, Centaurea gymnocarpa (Dusty Miller), Pyrethrum (Golden Feather), and Lobelia. The four kinds last named being of a dwarf habit of growth are very useful for planting around the edge of flower borders. The Lobelia does best in light soil and where it does not get too much sun. The first named varieties being of a taller habit of growth (one or two feet) are better suited for the centre of flower beds or borders. There are no summer decorative plants that can be raised from seed that will make a finer and more continuous display in the flower garden during summer than those named, if the seed is started early in a window, hot bed, or greenhouse, and the plants given even ordinary care and attention. If sown out of doors early in May they are very late in flowering. All the plants before named will also be found very useful for helping to fill up window and verandah boxes, rustic stands, and hanging baskets. Being of a perennial or lasting nature, many of them can be successfully dug up in the autumn before frosts, and placed in pots or boxes for indoor decoration during early winter. Those late in flowering, such as Ageratum, Snapdragon and Pentstemon are especially useful for this purpose. Seed should be saved from the best types of all the plants named during the summer months for the next spring sowing. The Dusty Miller does not seed the first year, as a rule. A supply of cuttings may also be obtained from most of the plants named, if the old plants are kept in a cool window during winter.

Tall Plants for Centre.

If a few tall plants for the centre, or at the back of a large border are required, plant a few seeds of the Ricinus (Castor Oil Bean). These may be planted about an inch deep in shallow boxes or early indoors in April, and transplanted singly into 3 or 4-inch flower pots when three or four leaves are started; or one bean may be put in the same sized flower pot mentioned, and the plants allowed to grow there until planted out in the garden about the second week in June. All of the seedling plants started early as suggested should be transplanted when from four to six leaves have developed into good soil singly into 2 1/2 or 3-inch pots or be set about 1 1/2 inches apart in shallow, well drained boxes filled with good soil.

Some Annuals Suggested.

A few varieties of annuals such as Asters, Chinese Pink, Phlox Drummond, Zinnia, Balsams, Marigold, Coreopsis, Scabiosa, Calendula (pot Marigold), Mignonette, Schizanthus (Butterfly flower) and other varieties if needed, may be sown indoors early in April for early flowering or they may be sown out in the border about the second week in May for later flowering. A great many annuals such as Poppies, Nasturtiums, Ten Weeks Stock, Silene Alysmeria (Catchfly), Gypsophila elegans, Nigella (Love in a Mist), Annual Larkspur, and other similar annuals do not transplant or succeed as well when sown indoors. It is best to sow these last named out of doors early in May where they are to grow. Sweet Alyssum and the Purple and White Candytuft are among the best dwarf edging annuals we have, and should also be sown out of doors early in May. Early sown Sweet Alyssum is often attacked by the small black flea beetle, that completely destroys the plants. Plants from seed sown later (end of May) are seldom attacked. The best remedy for this flea beetle is to spray the plants with a solution of Paris Green, made by first well mixing a small teaspoonful of Paris Green (or Arsenate of Lead) in a tablespoonful or two of cold water, then add water to make one gallon. Dusting the plants with Pyrethrum Powder, wood ashes, or soot are also good remedies. Another good annual, especially for a hot, sunny position is Portulacca. The seed is best sown broadcast on finely raked soil, and the seed raked in very lightly. Thin the plants later on from four to six inches apart. If you have a dry, hot, sunny position where very few plants will grow, try some Portulacca. If a few early Nasturtium plants, or of any climbing annual are wanted for window or verandah boxes, put two or three seeds in soil in three-inch pots in April, they will transplant much better from pots than from boxes. Nasturtiums are one of the best annuals for window boxes. The seed may also be sown rather thickly in window boxes out of doors early in May, and the plants thinned to about six inches apart later on. All annuals may be transplanted to advantage singly into small pots.

This list of annuals given may be extended considerably, those mentioned are among the most satisfactory for the average flower grower.—The late Wm. Hunt, O. A. College, Guelph.

Manure.
Much of the fertilizing value of manure is lost when piled in the barnyard till spring. Plan to haul it out to the fields as made. There, when spread or piled in small heaps, the bulk of this valuable by-product is utilized by next season's crops.

Burning arsenic emits a small like garlic.

STROUD'S TEA
Delicious, healthful, refreshing.

Old Dobbin Something More Than a Mere Machine.

He is Largely a Self-feeder—Does Not Rust When Resting—Has Horse Sense—Keep an Annual Inventory—How to Select the Breeding Ram.

(Contributed by Ontario Department of Agriculture, Toronto.)

The horse is, and will continue to be, the principal farm motor for an indefinite period. There are approximately 1,500,000 horses in Canada, all of which are used as a source of motor power. One and a half million may not seem to be a large number, but if we were to place the horses in the Dominion head and tail in one long parade line, they would reach from Halifax to Vancouver. So there is some horse flesh left in Canada, notwithstanding statements to the contrary by people interested in the manufacture of mechanical motors.

About the Farm Horse.

The farm horse as a farm motor differs from the mechanical farm motor in that it is self feeding, self maintaining, self reproducing, and self controlling. These qualities give the horse a tremendous advantage over the mechanical devices used for field work on the farms and for haulage on the roads.

The Horse Largely a Self Feeder.

Self feeding means a lot. There is no carburetor on the horse; nor are spark plug required. Green grass, good clean hay and oats, the products of the fields in which the horse labors, produce the energy that keeps up the horse's body, and keeps him going as a motor while labor is being performed.

The Annual Motor a Reliable One.

Within the horse's body cavity there is a wonderful self maintaining motor. The heart, the lungs, and the digestive organs make an engine combination of great efficiency. This hidden motor made of flesh, blood and tissue keeps tight, and makes its own repairs. Furthermore, the horse motor develops pep, or places in reserve energizing substances that may be used on demand. The mechanical motor when at rest does not improve nor grow stronger as does the horse, but frequently wastes or rusts. The high cost of gasoline, oil and motor mechanic service, together with the too frequent neglect that is accorded tractors on many farms, has reacted to the advantage of the faithful horse.

Old Dobbin Has Horse Sense.

Old Dobbin is also possessed of horse sense. No mechanical motor yet devised has possessed this function. Fuel for the horse motor is grown on the farm, and all profits remain on the farm. There is no tax on it either.—Lionel Stevenson, Secretary Dept. of Agriculture, Toronto.

ANNUAL INVENTORY.

Keep a Record of What You Own and What It is Worth.

The man on the land can learn much about his own farming operations by taking an inventory each year. No form of record will give so much information about the year's work as will an inventory properly kept. It is a definitely fixed date each year. The usual time for taking an inventory of the farm business is in March, when there is least feed and unsold produce on hand. The inventory of an ordinary farm can be taken in a half day, so there is no excuse in appearance of shortage of time. The information gleaned about the farm business through the study made possible by inventory taking is worth many times the expenditure of time and effort.

For convenience in keeping the farm inventory any blank record book with pages wide enough to permit spacing for a number of columns can be used, and if ruled to accommodate the entries for a number of years so much the better.—L. Stevenson, Secretary, Dept. of Agriculture, Toronto.

How to Select the Breeding Ram.

Select a ram that possesses scale, but not to the extent that he is lacking in quality. A well-developed ram as a rule transmits these characteristics to his offspring. He should be masculine in appearance, which is indicated by the carriage and boldness of head, short face, good width between the eyes, large open nostrils and an absence of feminine characters in general.

Rams should show good strength of back and depth of body, especially through the chest, with good width between fore legs and well sprung ribs. He should be closely made, that is, good depth, width of body, and short on legs.

The fleece should also be considered as to density, fineness and freedom from black fibres, with a skin that is pink in color, indicating that he is in good condition.

Purchase a pure-bred ram if possible, as blood will count and marked results will be seen in the quality of lambs. Breed character should be considered as it is very important, more especially in pure-bred flocks. Prices are relatively low and it pays to buy the best.

Head lettuce requires cool moist weather to head well. The loose leaf sorts are best for warm weather. Prepare orchards for spraying for San Jose Scale and other pests by pruning and scraping off loose bark. Be sure that all seed corn and root seeds are secured from the best sources available, and are in ample quantities for spring seeding.

TO PLAY "THREE TWINS"

The Rex Company Changes Its Production For the Week-End.

"The good Lord loves the Irish" is a quaint old saying, and few, the very stoney-hearted, few, could disagree with this, if "Peg O' My Heart" is any criterion by which we may judge those lovable souls whose family trees are rooted in the soil of the Emerald Isle. Care-free, quick-tempered, true as steel, and just the right amount of mischief—all these elements are twisted together to make one Irish heart, and so aptly and cleverly portrayed by Zana Vaughn in the performance at the Grand on Thursday evening.

Friend Rex and his "happy family" presented "Peg O' My Heart" last night, and no more proof of the popularity of this company among Kingston theatre-goers is needed, after seeing such a splendid audience, who turned out in spite of the raging snow storm. This play is not new to Kingston, but the fact that Rex was playing it was enough.

The play was as good as their best, and that's saying a lot when you speak of Rex and his co-stars. The plot has plenty of action, fun, thrills, love, tears, and some more fun, and concerns the adventures of a wilful little Irish girl answering to the name of Margaret—to her aristocratic "auwnt," and "Peg" to her friends—who drift into the English country home of her poor-rich relatives. Peg is persuaded to leave her father in New York, where she had been brought up in the slums, and to journey to England, with her dog "Mike"; there to be educated in the environments of an old English family, under the "tender" care of Aunt Monoca, who receives one thousand pounds a year thereby. Then the fun really begins, and it's one continual uproar to the end of the chapter.

Zana Vaughn plays the title role of "Peg" in rare style, and she is ably supported by William Seymour as Jerry Adair, Rex as Cousin Almeric in his usual and funny self; while Florence Winters and "Billy" Yule as Aunt Monoca and Mr. Hawkes, the family lawyer, are also splendid. During the intermissions, Hazel Williams and William Seymour, with the Park Kiddies, rendered delightful vaudeville acts.

On Friday and Saturday, the Rex company will produce "The Three Twins" in place of "Peg O' My Heart," owing to the illness of Miss Vaughn, who played her difficult role on Thursday evening, against the orders of her doctor, so that her Kingston friends should not be disappointed. "The Three Twins" is one of the best in the repertoire of the Rex company, though Miss Vaughn seldom appears in the cast, and it should attract crowds for the three performances.

The First Robin.
is even now flying toward our city. That means new shoes, undergarments, hats, lighter coats, dresses, suits, porch furniture, screens, paint, moving vans, vacation necessities; Great Caesar, it means unlimited things that must be purchased for the home, the individual, and business. Tell in a good advertisement that will reach everybody, just what you propose to supply.

Ads. Are Informative.
Store advertisements are informative. They have done inestimable good in acquainting the world and his family with the most efficient methods of running home and business.

When They Stop to Look at Him!

Of course, they'll admire him—you take that as a matter of course—Isn't he very healthy, happy baby, the object of comment and praise wherever he goes? And furthermore, isn't this particular baby just a little bit handsomer and more adorable than any other baby in existence? Of course! Then be sure that you provide him with a CARRIAGE to set off his beauty and make him show to even greater advantage. There is nothing like our smart English Perambulator to add to the attraction of the very young.
