TO CUT TREASURE OUT OF LUSITANIA

Leavitt, Head of Salvaging Concern, Sure of Reclaiming \$6,000,000.

New York, June 23.—The steamer Blakeley arrived here from Philadelphia, in order to take on part of the equipment to be used in the attempt to cut through three decks of the Lusitania and raise to the surface \$5,000,000 in gold from the strong room and the purser's safe, said to contain \$1,000,000 in gold and jewelry.

B. F. Leavitt, president of the Leavitt-Lusitania Salvage Company and inventor of a diving suit for work under 275 feet of water plans to arrive at the point off Kinsale Head, where the Lusitania lies, on or about June 29th.

"If the weather is pleasant," he said, "we will cut the treasure out of her in three weeks. Storms or bad weather may delay it, but twenty-one days of good weather will see the job completed."

The stop in New York harbor is to take on board a thirty-ton boom, which will be laid on the water as a kind of platform when the effort is made to haul to the surface the twenty-ton safe in the purser's cabin.

The difficulties in the way of salvaging the treasures of the Lusitania have been investigated, and pronounced to be insurmountable by many engineers. The profit to the salvagers, even though the project were successful, had been doubted because of the many claimants and the complex legal propositions involved in quieting titles. The depth of 275 feet is an insuperable bar, in the opinion of most marine engineers, because of the fact that, while divers have explored at that depth, none has been able to work so deep.

Divers Wear Metal Shell.
Divers are encased in a rigid shell of metal and hard rubber to prevent them from being crushed by the pressure at such great depths. Mr. Leavitt says that he has been able to overcome this obstacle by a diving suit of his own invention which resists the pressure of the water and enables the man to work at great depths. As for the claims of owners, he, the ship company or the insurance companies to the treasure, if it is raised, Mr. Leavitt said that he would take his chances in the International Salvage Court.

"I believe that we will get by far the greater part of the value of the treasure," he said. "Any salvage court would allow it to us. We have made no arrangements in advance with owners, shipping companies, insurance companies or the British Admiralty, and we do not need to, because a salvage company has the absolute right to proceed on its own initiative in the case of a vessel sunk so deep and sunk so far from shore. Our rights will be taken care of thereafter in the courts."

British marine engineers have argued from the theory that the terrific pressure of the water at the depth of 275 feet or thereabouts to which the Lusitania sank, must have crushed her like an egg-shell. Mr. Leavitt, on the contrary, holds that the water, forcing its way into the Lusitania as it sank, kept the pressure outward equal to the pressure inward, except in a few airtight compartments.

"A bottle of air will be smashed when it is lowered ten feet below the surface," he said. "A bottle of water may be lowered 10,000 feet without being crushed. There is no doubt in the world but that the Lusitania exists today exactly as it did when it sank."

Many Abandon Venture.
Great wrecking concerns like the Merritt-Chapman Company have studied and then dropped the Lusitania venture, believing the odds were against any successful salvaging operations. The idea of raising the ship itself was never considered feasible, and it is not being attempted by Mr. Leavitt and his expedition. The purpose is solely to make big holes in the three decks which lie over the safe and strongroom, and then lift up the safe and the boxed gold through these holes.

The decks are to be opened by nitro-glycerine. The great difficulty of this, pointed out at the offices of the Merritt-Chapman Company, was that the general experience in dynamiting steel ships had been that the explosion ripped and twisted the decks and other steel work, so that the result, instead of being a hole, was an unmanageable mass of ragged steel.

"We will not use dynamite, but nitro-glycerine," said Mr. Leavitt. "Dynamite will not explode under the pressure imposed on it at the depth of the Lusitania, but nitro-glycerine will. It will not twist everything up, but will cut through the deck like a knife. When holes have been made through the three decks, the safe will be blasted from its fastenings and will then be hoisted to the surface with the aid of the boom.

Divers to Work in Shifts.
"I am taking four divers who will work on two-hour shifts. The thing is feasible only because of the diving suits which I have invented, making work possible at that depth. The suits weigh 350 pounds on land. At that depth under water their effective weight would be 75 pounds."

These suits, which are metal forts with jointed limbs and heavy glass portholes for sight, are equipped with tanks to supply oxygen, and with caustic soda to take up the carbon dioxide. In an ordinary suit the diver would be smashed at that depth as if a building had fallen on him. If he escaped crushing, he would probably be killed by the "bends," a disease induced by pressure, as he was lifted to the surface.

As long as the special suit does not leak, however, there is no danger of bends, because the pressure is normal. On this account, the diver may be hoisted at once to the surface without danger. "Bends" is due to the absorption of nitrogen and other gases by the blood in order to increase the blood pressure and body pressure as increased pressure is put on it from the outside.

This does no harm while the pressure is continued, but if suddenly released by elevation to the surface, the nitrogen dissolved in the blood escapes as a gas, filling the body with bubbles and often causing death. It would take many hours to raise a diver safely from a 200-foot depth in an ordinary suit, even if he were not killed outright."

Mr. Leavitt said that his expedition was being undertaken at a total cost of about \$160,000 as against the prospects of the lion's share of \$5,000,000.

"Some big financiers have sought to interest themselves in it during the last few days," he asserted, "but it is too late. I was offered \$50,000 for the proposition as it stood, but refused. The investors who have put up the money to back the expedition are all middle class people of moderate means."

The ship Blakeley was built for the Shipping Board in 1919. It is 290 feet long, with a twenty-four foot beam.

The wise man thinks before acting, and there's where he differs from the fool.

A TEN MILE WHEELBARROW RIDE FROM LAKEFIELD TO PETERBORO.

The picture shows Warden J. C. Strickland, of Lakefield, Ontario, providing the motive power for the wheelbarrow. The man hidden behind the umbrella in the wheelbarrow is A. E. Dawson, who resides in Lakefield, but whose place of business is in Peterboro. He refused to pose for the photographer. The long distance wheelbarrow ride was the result of a wager that two men could land their passenger in Peterboro within five hours. They made the ten mile trip in three hours and ten minutes. Mr. Dawson was permitted to carry an umbrella, a book and fill the bottom of the barrow with straw.

PROBS:— Saturday, fair and warm.

SATURDAY!!

Sensational Values at Steacy's Re-Building Sale

A stupendous one-day's selling event with values that are little short of sensational. Join the crowds and shop at Steacy's to-morrow.

Half Price

25 only, Summer Silk Dresses in Taffeta, Georgette and Satin—all new models, displaying the latest style tendencies—all sizes. Priced in the regular way \$29.50 to \$50.00.

10 only, Homespun Suits in colors Harding Blue, Tan, Blue and Tan Check. Sizes 16 to 38. Regular \$29.50 to \$47.50.

HALF PRICE

Gingham Dresses

\$3.48

45 only, Billie Burke Gingham Dresses in many smart styles—Checks, Plaids and Over-plaids—sizes 16 to 40, and worth regular \$7.50 each.

GEORGETTE BLOUSES
Flesh, White, Sand—worth regular \$7.50.
Sale Price \$4.48

Extra! Extra! Extra!

EARLY MORNING SHOPPERS
Save 15% on all your regular cash purchases.

TRIPLE DISCOUNT STAMPS

As an extra incentive for early morning shoppers we offer Triple Stamps from 9 a.m. till 11 a.m.

HOSIERY SALE!!

QUEEN QUALITY GLOVE SILK HOSE—
200 pairs Queen Quality Glove Silk Hose—fine heavy weight; in colors Black, White, Navy, Brown, Grey; all sizes and worth reg. \$2.95 Sale Price \$1.89

HOLEPROOF SILK HOSE—
400 pairs Holeproof Silk Hose; first quality; ribbed tops; all sizes; in colors Black, White, Navy, Brown, Grey. Very special for Saturday . . . Sale Price \$1.65
