MOTOR CAR INDUSTRY MAY LOCATE IN KINGSTON

Hoped That Arrangements Can Be Made to Secure Birmingham Motors Ltd.

Kingston will secure an important new industry providing certain financial and other arrangements can be made satisfactorily. The industry is that of Birmingham Motors, Ltd., builders and designers of the "Birmingham Flexible Axle 6," which is regarded as the world's easiest riding car. Negotiations have been going on for some time for the location of this new industry in Kingston, and it is hoped that the necessary arrangements can be made for the securing of the plant.

The headquarters of the plant are at Jamestown, N.Y., and city clerk, Dr. W. W. Sands and William Peters, chairman of the Civic Industries committee recently made an inspection of the company's plant at Peterboro, and made a thorough investigation into the company's activities, and have reported most favorably. The company is incorporated under a Dominion charter.

The Whig is carrying an advertisement giving all the particulars regarding to what is needed to get this industry started in Kingston.

The authorized capital of the company is placed at \$3,000,000 divided into 300,000 shares at \$10 each. It is predicted that the company will develop into one of the largest industrial concerns in Canada.

It is of interest to note that one of the stock cars of the company was recently given a test. It was driven 36,000 miles in all kinds of weather and over all kinds of roads, and following this long trip the car was just as good as ever.

If the necessary arrangements can be made, the company will purchase the Frontenac Moulding Company's Building, as it is believed that this building will be suitable for a start in this industry. If the arrangements are put through, the company hopes to start work at once, and will have three hundred men employed in the first six months, and at least double that amount inside of a year.

The money subscribed will remain in Kingston for the building of the cars. The company has opened a temporary office with the Automotive Equipment Company, at 109 Brook street, where subscriptions can be placed and where the plans for establishing the industry will be explained. A number of subscription lists are being circulated for signatures.

work, of lectures on anatomy and allied subjects.

Another feature will be the course in folk dancing, interpretative dancing and ball room dancing by Miss Gladys Dickson, Toronto. The class will be an attractive one, the music being supplied by Miss Dickson's sister.

NEW ISOLATION BUILDING

Of the Kingston General Hospital May Be Started Next Month.

A further meeting of the isolation hospital building committee was held Wednesday when the plans of the proposed building were further discussed. The architect, Mr. Lee, Toronto, was present and the committee hopes that the plans made will progress so that the tenders may be called for, contracts awarded and the building started before the last week of July. It is hoped that the roof will be on so that inside work may be done next winter.

The plans for the building indicate that it will be a very fine structure, fully equipped for the handling of infectious disease, according to the latest and best methods. Before outlining the nature of the building, Drs. A. E. Ross and W. T. Connell made an inspection of some of the most modern of the isolation hospitals in the larger centres of Canada and the United States, and their report was considered by the committee in the preparation of the plans.

The building of the hospital is not to exceed the sum of \$150,000 which was voted by the city council and the committee hope to be able to keep within the estimate.

The hospital will be built of Kingston limestone and will be on the site almost opposite the new central heating plant, for the General Hospital and Queen's university, which is now in the process of construction. The building will be in the shape of a wide U with the base of the figure 125 feet long and the wings forty feet long. The base of the U will be parallel to King street and the wings extend towards the street. The building will be set well back from the street line, the end of the wings being 35 feet back. The front of the main part of the structure will then be in all about 75 feet from the line.

The central part of the main section will be three storeys high while the wings will be two storeys in height. The two floors will be used for wards, semi-private and private rooms for the various types of infectious diseases. The sections are also planned so that they are connected by doors which can be closed and thus isolate different parts of the building. The basement of the main building will be used for kitchens, nurses and help's dining rooms, and help's quarters. The third floor of this part of the building will be devoted to nurse's quarters. On the first floor of the main building will be the administrative offices for the doctors and office staff.

There will be two entrances, one at the front of the building, the main entrance, and one at the rear, the receiving entrance, through which the patients will be received and near which the elevator will be situated. A driveway will connect the rear entrance with King street.

SEVERAL FEATURES ADDED

To Queen's Summer School Programme — Physical Training and Dancing.

Through the director and staff of the school, several new features have been added to the already extensive programme of the Queen's summer school, which will open next Monday and will attract several hundred teachers of the Dominion here for the five weeks' course.

The athletic and physical side of the life and studies of the students is one that takes the attention of the staff of the school, who state that one of the troubles faced is that many of the students want to work too hard and hence the athletic side of the course is stressed. That the teachers should want to spend much of their time in study is natural, as in the majority of cases they are responsible for the payment of their fees and hence are directly interested that they pass the examinations. With the majority of the winter students the opposite is true, as many are being sent by their parents.

This year in addition to the Grade B training course, which was given by the Militia department last year, a part of the grade A certificate course, a much more advanced study will be given by Militia department instructors. This course will require three hours a day while the Grade B course, which requires one hour, will also be given. While this Grade A course will not give the certificate to satisfy the department of education requirements for certificate to qualify the teachers wishing to give physical instruction in Collegiate, the course is practically the same consisting, besides the physical

TRY MAGNESIA FOR STOMACH TROUBLE

It Neutralizes Stomach Acidity, Prevents Food Fermentation, Sour, Gassy Stomach and Acid Indigestion.

Doubtless if you are a sufferer from indigestion, you have already tried pepsin, pancreatin, charcoal, drugs and various digestive aids and you know these things will not cure your trouble—in some cases do not even give relief.

But before giving up hope and deciding you are a chronic dyspeptic just try the effect of a little bisurated magnesia—not the ordinary commercial carbonate, citrate or milk, but the pure bisurated magnesia which you can obtain from practically any druggist in either powdered or tablet form.

Take a teaspoonful of the powder or two compressed tablets with a little water after your next meal, and see what a difference this makes. It will instantly neutralize the dangerous, harmful acid in the stomach, which now causes your food to ferment and sour, making gas, wind, flatulence, heartburn and the bloated or heavy, lumpy feeling that seems to follow most everything you eat.

You will find that provided you take a little bisurated magnesia immediately after a meal, you can eat almost anything and enjoy it without any danger of pain or discomfort to follow and moreover, the continued use of the bisurated magnesia cannot injure the stomach in any way as long as there are any symptoms of acid indigestion.

Presentation and Address. A pleasant evening was spent at the Methodist parsonage at Maberly when members of the church and Ladies' Aid gathered to spend a social evening with Rev. and Mrs. Smith, before their departure from Maberly. An address was read and a beautiful chair presented after which refreshments were served. Mr. Smith made a few fitting remarks before parting. Rev. and Mrs. Smith and family leave for their home at Crow Lake where Mr. Smith intends to take a year's rest on account of ill-health.

Gave a Kitchen Shower. A kitchen shower was held last Wednesday evening at the home of Mrs. Charles Quick, Division street, for the bride and groom, Mr. and Mrs. Joseph Ryder. The evening was spent in games and music after which dainty refreshments were served. The bride and groom received many useful kitchen utensils which were much appreciated.

JELlicoe's DAUGHTER VISITS CANADA.
 The above photograph shows Hon. Lucy Jellicoe (right) daughter of Viscount Jellicoe Governor-General of New Zealand, her uncle, Maj. H. R. Cayzer, M.P. for South Portsmouth (centre), and Mrs. Cayzer (left). Major Cayzer is Lady Jellicoe's brother. Miss Jellicoe is passing through Canada on her way home to England for three months holiday, after spending two years in New Zealand. She likes Banff the best of any place in Canada visited so far. "I think Banff is simply heavenly," she said, when interviewed. She said she was prepared for Canada's torrid heat last week from what her father had told her about it: Canada was hotter than even New Zealand. The party was charmed with the beauties of Niagara district and found a visit to the Falls and the adventure of visiting the cave of the winds in face of a drenching spray, quite exhilarating.
