LACKIE'S

To-morrow's HORIZOPE

By Genevieve Kamble

SATURDAY, AUG. 12.

This is to be a particularly lively and eventful day, according to the interesting chain of Lunar and Solar aspects. All commercial and professional matters, especially those relating to literary interests, should react to the position of Sol parallel Mercury, and all affairs should feel the stimulus of the Lunar trine to Mars and Neptune. It may be a time to push new projects, although money should be judiciously handled. Changes are forecast.

Those whose birthday it is may look forward to an active and interesting year, with new projects and bold ventures favored, but they should handle money with care and sign all papers cautiously. A child born on this day will be clever, energetic and industrious and should succeed through the exercise of these faculties. I should be careful and not squander its money.

THREE OMELET RULES.

If we could write recipes in the French manner, we might stretch out the rules for making omelets to twelve or even twenty points.

There are some good omelet points in a book of 500 recipes called "Eggs and How to Use Them," by Adolphe Meyer. This author thinks six egg omelets are large enough, for, as he says, "the production of an omelet worthy of the name is more difficult than many suppose, or than some are willing to admit."

Three most important rules, he says, are to be followed in the preparation of an omelet.

"First, the omelet pan must be extremely clean and never used for any other purpose. When not in use it should always be left a little greasy; neither water nor any other liquid should ever come in contact with it. To clean the pan it should be slightly heated and then rubbed with fine kitchen salt and a coarse towel, care being taken that the pan never become red hot, as otherwise it is liable to become rough."

It is sensible to interpolate the fact that this rule is more for hotel cooks who cook omelets one after another by the dozen of a morning or noon in the same pan rather than for home cooks, but there is suggestion in the rule for the smallest housekeeper.

"Second, the eggs should be well beaten. Cooks who have a reputation for exactness of method strain the eggs through a towel or strainer, which gives the most satisfactory result, as the whites and yolks become well mixed and the omelet when cooked will not show those little white spots which are so often seen in omelets and which prove the ignorance of the cook or his negligence in the preparation of them.

"Third, an omelet must always be cooked over a brisk fire, and here in where the ability of the cook is fully tested; the quicker the omelet is made the better. Some cooks take pride in cooking omelets without stirring the eggs with a fork or a spoon, and it is true that some may succeed in this way, but as a rule such omelets are not so delicate as when the eggs are stirred while cooking."

Of course this means stirring until they begin to get—no longer.

PAINT OR STAIN THE WALLS

Guardians of Health Assert That Paper Retains Germ and Disease Vermin.

Many physicians and sanitarians contend that it is susceptible of proof that certain wall conditions are detrimental to health. They claim that materials pasted on the wall with the vegetable pastes, used for the purpose, may harbor not only vermin, but disease germs. They contend that many of the ills, particularly of children, come from unsanitary wall conditions.

They set forth instances where contagious diseases have been communicated a long time after the rooms were occupied by the diseased party and when the paper was being removed from the wall.

If these things are true, and we have it on good authority that they are, the painting or coloring of walls would seem to be a matter of good judgment on the part of the property owner.

AN EASY WAY TO COLOR LACE

Yellow Ochre Serves Satisfactorily in the Dry Cleaning of Various Articles.

White lace, net, tulle, or anything of similar texture, can quickly be transformed into a cream-white or the fashionable yellow shade in a very simple way. It being a dry-method the lace loses none of its newness, and the most delicate lace may be subjected to this treatment without harm.

Put a quantity of ochre (yellow) in a box or paper bag, drop the material inside, and shake the box until the powder has sufficiently tinted the lace. After removing the material, shake out any superfluous powder. If a pale tint is wanted, mix rice powder with the ochre. Dainty lace waists may take on a new appearance if treated to an ochre bath.
