THE DOMINION LIFE

HAS GIVEN A GENERATION OF SERVICE TO ITS POLICYHOLDERS

This Company has passed from childhood to youth, and from youth to full grown manhood, with a record that is unequalled. It has stood the test and is entering upon years of even greater service and accomplishment. The security to its policyholders is unquestioned—its liberality and fair dealing with its agents is acknowledged. Those entering the life insurance field will find this Company, with its participating and non-participating policies giving protection at minimum cost; with its agency contracts giving maximum guarantees to those who serve the Company; with its frequent opportunities for promotion to those who win their spurs in its ranks—an ideal Company with which to connect.

Why It Saves Coal—

The Hecla Pipeless Furnace has all the big features of the famous Hecla Furnace.

- (1) It has the STEEL-RIBBED Firepot. This invention gives the Hecla three times the radiating surface of the ordinary furnace. That means more heat—less fuel. At least one ton saved out of seven. (2) It has the big CIRCULAR Waterpan that keeps the air moist. You feel warmer at 65 degrees when the air is moist than at 70 degrees when the air is dry. Hecla warmth is healthful and economical. (3) The Register of the Hecla Pipeless is scientifically planned. It is the right size for the heating capacity. The cold air balances the warm air. No heat is lost in friction.

THESE savings are considerable. Owners of Hecla Pipeless furnaces claim they save from 25 to 50 per cent. An every-year economy good for the rest of your lifetime.

Patented FUSED JOINTS make this system proof against leaks of gas or dust. We can install in any home—IN ONE DAY. No masonry. No cutting up of walls. Only a small cellar needed.

STORAGE BATTERY CHARGING.

In the preceding installment we discussed, but, owing to lack of space, did not fully cover the above subject.

It should be remembered, in charging lead cells, that it is necessary to allow two and one-half volts for each cell. If a smaller voltage than that which is to be reached by the cell is used, you would discharge instead of charge the cell. If the sources of supply voltage is not sufficient to charge all your cells in series, they should be divided into groups, and these groups may be placed parallel to each other. If this arrangement is necessary, care must be taken that the negative lead from one bank of cells in series to the negative pole of the other bank, also in series, and from positive to positive terminals of each bank. Then the leads from the two banks thus joined

will be led as described in the previous installment; that is, from the positive pole to the positive pole of the dynamo and negative to negative.

Another important precaution in charging should be carefully borne in mind. Never allow naked lights near a charging battery. Hydrogen is given off freely while charging, and, emerging from the cell at a critical point of mixing with the air, is highly inflammable. The writer knows of several very painful accidents that have occurred owing to disregard of this precaution. This occurs, generally, through operators peering into the cell to ascertain if it is gassing, using a lighted match to assist them. A cell, when nearing the completion of a charge, will gas very freely, and is one aid to ascertaining when the charge is complete.

APPARATUS AND DEVICES

By RALPH BROWN, RADIO ENGINEER

VACUUM TUBE SOCKETS.

One of the most important things in any electrical equipment is that good contact is made. In vacuum tube work a good socket is absolutely essential. Pictured herewith is an adapter that embodies all the best points required in a socket. The base is of heavy bakelite, providing adequate insulation. The springs are of bronze, nickel finish. They are so arranged as to make positive contact on the sides of the tube prongs. As a wiping spring contact is made, a clean, positive connections is assured.

KINGSTON RETAIL MARKET PRICES

Kingston, Sept 8th. There was a further decline in prices during the week in some staple articles, but the drop in wholesale prices of some was reflected in the retail trade, such as the twenty-five cent reduction in sugar, and the slight change in grain, hay feed, etc. The Kingston market has been flooded with fruit, such as tomatoes, melons, peaches and plums and the prices fell accordingly. Melons were more plentiful than last week and did not sell so readily. Tomatoes dropped to 50 cents per bus. and the householders were able to supply their requirements. There will be plenty for the next two weeks. The same conditions affected garden produce.

The Kingston cheese board saw an advance of one cent in cheese and as the supply is much limited this year the chances are that the price will be firm for export cheese during the remainder of the season.

Table of market prices for various goods including Hay, Straw and Grains, Hides, Wool, Etc., and Dairy Produce.

Table of market prices for various goods including Butter, Creamery, Cheese, Eggs, and Unclassified items.

Table of market prices for various goods including Fish, Meats and Poultry, and Beef.

about thirty-five of her friends to a corn roast on Thursday evening. Mrs. Goslin is spending a few days in the city with Mrs. M. Leonard. Duck hunting is the order of the day.
