

Don't let diapers irritate your baby's skin

NO matter how carefully you bathe and powder him—if his diapers are washed with harsh soap—his tender skin will suffer. The diaper rash that is the source of such severe suffering to babies is caused by the very thing—washing diapers with harsh or impure soaps.

Safe for all his little clothes

Keep your baby's diapers soft and comfortable. Wash them in pure, safe Lux suds and thoroughly rinse.

There is no free alkali in Lux to stick to them and make them irritating. No harmful ingredient to inflame the sensitive skin. These pure flakes are safe for all the clothes that touch his tender skin.

Use Lux for your baby's soft woollen shirts and bands, his petticoats and dresses, his diapers and socks.

To keep diapers from irritating

To prepare for washing: Remove all solid matter immediately to soak in cold water. If diapers are simply wet place in a covered pail and let soak in cold water. To wash: Whisk two tablespoonfuls of Lux into a thick lather in a tub of very hot water. Let diapers soak for a few minutes then dip up and down pressing suds repeatedly through them. Thoroughly rinse in three waters. Boil diapers once a week using one tablespoonful of Lux to a gallon of water.

SEASONABLE WORK IN THE GARDEN

THE FLOWER AND VEGETABLE GARDEN IN JUNE

(All rights reserved by T. Sheward in U. S., Canada and Great Britain.)

June is the busiest month of the year in the garden. At this season when everything is growing rapidly, it will be necessary to keep all weeds eliminated by constant cultivation. To have a steady supply it will be necessary to sow succession crops of beans, lettuce, radishes, beets, peas, etc. A great number of other things such as Dahlias, Gladiolas for late cutting, tomatoes, celery and any bedding plants not set out last month should be planted now. In the diagram is shown the principle work for the month and how to do it. Figure 2 shows how to Summer-prune your fruit trees to cause formation of fruit spurs. A green shoot is pinched back to four to five leaves in Summer;

then in Winter-pruning, it is cut back to two. The idea is to plump up the basal buds, which generally remain dormant and cause these to change into spurs.

Pruning By Lorette System. There is a new system of pruning practiced in France and England called "The Lorette System" and it is said to be giving wonderful results. It is a system of Summer-pruning by which only one leaf is left above the basal cluster. If the shoot shown at fig. 2 were pruned as recommended in this system, only one leaf would remain instead of 4. Below this leaf marked "A" there is a cluster of small leaves called the "Basal Cluster," (not shown), which fall away later in the season and which do not bear ap-

parent eyes or buds such as the other leaves do at their base. The idea is to develop these basal buds and turn them into fruit buds. These basal buds are very useful in training fruit trees as the nurseryman and gardener can get a branch to grow in any direction by cutting to a basal cluster when training a young tree.

In Summer-pruning a bud often breaks into a wood bud at the point pinched back. This new break must be pinched back to one leaf, as shown at fig. 14.

Budding. Budding is another important operation that is best performed this month. It is generally used in propagating fruit trees, etc., but is often used by gardeners to bud such things

as Roses, with new sorts. This is how it is done: A friend gives you some cut flowers of a variety which you like and you want to grow these in your own garden. You have some rose bushes already growing there, but not of very good varieties, and you wish to bud them over to the new sort. First you cut off a number of buds from the new sort in the manner shown at figures 1 and 12 with a piece of the leaf-stalk remaining on the buds to hold them. Next you go to the old bush growing in your garden and with a budding knife, (fig. 11), you make a T cut on the stem of the bush as at fig. 3, open it up, (fig. 4), and slip in the bud, as at figs. 5, 6 and 7; you then tie it in with raffia as at fig. 9, you cut the raffia and next spring cut away part of the branch above the bud, which will bear flowers the same year of the new sort. If the bud has not taken, it will appear as at fig. 10. If you wish to get big flowers on your rose bushes, dis-bud them in the manner shown at fig. 15.

Tomatoes and Other Vegetables Do you grow your tomatoes on one stem? Fig. 17 shows you how to do this.

Have you ever tried sowing a crop of early cabbage in June on land that has been under crop early in the year, without transplanting? Sow the seeds thinly in the row; then thin them out to one foot apart in the row as at fig. 13. It saves a lot of watering if a dry spell comes along later on. New plantations of Asparagus should be staked as at fig. 18 to prevent the

wind from pulling them up by the roots. Plant Gladiolas as shown at fig. 16 and Dahlias as at fig. 19 and if you desire to root any cuttings of flowering shrubs such as lilacs, now is the time to do so. Make the cuttings from the young wood, (fig. 20) and root in a frame or under a bell glass.

Melons. Cucumbers and melons growing in frames will need stopping. Stop them at one leaf past the fruit (fig. 24) and train them to spread all over the frame (fig. 25). It is often necessary to hand-fertilize the flowers of melons to make them set properly. Figures 21 and 22 show a female flower, fig. 23 shows a male flower bearing pollen, also the way to hold it for distributing the pollen on to the female flower. This assures a good crop as fruit will not be borne unless the female blossom is fertilized naturally or artificially.

Things may be fitting to be done which are not fitting to be boasted of.

Clear Baby's Skin With Cuticura Soap and Talcum

CHAPLAIN MAJOR J. C. PIPER Who is in camp at Niagara, Ont. with the Haidimand Rifles. This is his thirtieth year in camp. He is one of the oldest acting chaplains in Canada, and served with the C.E.F. overseas.

WEDDING AT BATTERSEA

The Bride and Groom will Reside Near Barriefield Two well known young people were united in marriage at the home of the bride's father at Battersea on Tuesday evening, June 12th. The contracting parties were George Earl Shepherd, only son of George Shepherd, Pittsburg township, formerly of Inverary, and Flora Lillian Ormsbee, the oldest daughter of Mr. and Mrs. William Ormsbee. The wedding took place beneath a floral arch in the parlor. The bride was given away by her father, and was supported by her sister, Miss Ethel Ormsbee. The groom was attended by his cousin, Elwood Thompson, Inverary. The wedding march was played by Miss Jennie Clarke. There was a large number of relatives and friends present to witness the ceremony.

After all had enjoyed the sumptuous repast, the bride and groom left on the midnight train from Kingston for Toronto, the time of waiting was spent listening to a programme of music and recitations. A large number of valuable wedding presents indicated the popularity of the young couple. The bride wore a dress of charmeuse silk. Her sister was beautifully dressed in an Egyptian crepe waist and skirt of alltime crepe. The bride's going-away dress was a Poiret, twill suit with iridescent hat. The groom's gift to the bride was a wrist watch, to his attendant, a scarf pin, and to the bridesmaid and pianist each a gold pin.

At a late hour the bride and groom left for their train in the midst of a shower of confetti and good wishes. On their return they expect to make their home on the groom's farm in Pittsburg, near Barriefield.

The Selfish Playgoer There was but one pair of dry eyes in the house. But for this exception the audience was unanimous in its tearful reception of the play. The strong-minded exception struggled in vain to control his unseasonably mirth. At last the weeping woman next to him reproachfully addressed him. "If y-you don't like the play," she sobbed, "you m-might at least have the d-decency to let other people enjoy it!"
