HANDLING LAYING HENS

Feeding and Housing Must Both Be Considered. .

Give the Birds a Good Run-Dry Mash Hoppers Save Waste-Suggested Ration-Forage Crops-Don'ts for the Layers.

Contributed by Ontario Department of Agriculture, Toronto.)

Following are results of experiments carried on by the writer when connected with the Agricultural Experiment Station for Vancouver Island, Sidney, B.C. Houses and Yards.

The house in which the birds are kept is provided with a water-proof roof and a floor that is always dry. In preparing the house for the new flock of pullets, everything movable is taken out, cleaned, and then saturated with a mixture of equal parts of creosite and coal oil. The interior of the house is well scraped and swept clean of any foreign material. A coating of lime-wash is then applied, and the movable equipment replaced after the lime-washing has been done. When everything is dry, a 6-inch layer of dry straw is placed on the floor. The house is now ready for the five-month-old pullets, and care is taken to see that only strong. vigorous birds are permitted to oc-

cupy house space. The runs provide ten square yards of surface for one bird. They are in duplicate and are used alternately for feed growing and exercise space. Late-leafing, deciduous trees only are used about poultry yards. The coniferous windbreaks are located far enough away from the poultry yards and buildings to permit of maximum sunlight entering all space occupied by the birds. Feeding.

A dry mash hopper of such construction as will prevent waste is supplied with the following mash mix-

ure:			
Wheat bran.		400	pounds.
Ground oats		300	Pounda.
Beer scrap		200	
What shorts		288	**
Corn meal.		100	**
Fine salt		4	**
This mixture	is	always	availa)
or the hirds	The .		

for the birds. The whole grain ration is composed of two parts wheat, one part cracked corn, and one part oats, by weight. This is fed on the floor of the house morning and evening, in the daily proportion of five pounds per fifty birds, during the late autumn and winter. When a supply of skimmilk is available, the birds are given all they will take, and the beef scrap is reduced one-half. Shell, grit, and charcoal are always before the birds, being supplied in small metal hoppers which are conveniently

Forage Crops for Poultry.

Small areas of kale, chard, and alfalfa were grown to be used as green feed for poultry. The chard was relished to a greater extent than the other green feeds. Green alfalfa was most usful during its season from May to November. For winter green feed, kale and mangles were used. For little chicks, chickweed was supplied during the first ten days, then lettuce and chard. A supply of clean water is always available for all the poultry; it is given in fountains placed thirty inches above the floor and surrounded by the narrowest possible platform on which the birds may stand to drink. This method has proved very satisfactory, as it prevents the birds from working dirt and | the government motion pictures are foreign matter into the receptacles. The laying houses are kept thor-

oughly clean. Dropping boards are scraped and sanded every morning. All litter and dust is removed every three weeks, the house swept out, and fresh litter again placed on the floor. The perches are sprayed with a creosote and coal oil mixture in equal parts, every three weeks. - During the winter period a dust box four feet square and ten inches deep is provided. The birds are always given the freedom of an outside run, no matter what the weather is. The drawer type of trap nest is used, the birds readily becoming used to its action. Broody hens are confined in slat-bottom crates for the necessary period required for the change of their opinion on the subject. Don'ts For the Layers.

Don't put pullets into an unclean

Don't waste time on unthrifty, deformed, or ailing birds; get an axe and a block of wood. Don't neglect to clean the dropping

boards daily. Don't forget to clean the house and provide new, clean litter every three Don't neglect to keep the dry mash

hopper filled with a mash made from clean, wholesome grain, and meat Don't waste your time with wet

mashes; feed everything dry. Don't neglect the drink; supply abundant water and milk. Don't neglect the supply of shell

grit, and charcoal. Don't waste time and money feeding tonics; well-cared-for poultry do not need nor are they benefited by, such a practice.-L. Stevenson, Sec. Dept. of Agriculture.

The worthlessness of poor quality bulls lives after them-in their lowproducing daughters. Apples are not very subject to blight and if we are careful the apple

orchard can be kept clean. "Agriculture, for an honorable and high minded man," says Xenophon, is the best of all occupations and arts by which men procure the means of living."

In the morning, sow thy seed, and in the evening withhold not thy hand; for thou knowest not whether shall prosper either this or that, or

No well-informed person has declared a change of opinion to be inconstancy.

MARKED EPOCH IN HISTORY.

Founding of First Public Library, at Alexandria, Eygpt. The first important private library

of which we have definite knowledge belonged to Aristotle. It was later brought home to Rome by Sulla. Such private collections indirectly influenced public libraries. The largest library of the ancient

world, that at Alexandria, is said to have been prompted by Pharereus; the actual founder was either Ptolemy I., Soter, or Ptolemy II., Philadelphus. Possibly the father had gathered a fine private collection and the son threw it open to scholars as a real library; for it occupied quarters in the royal palace, near the famous museum.

This library marked a new epoch in history. It was the first scientifically administered institution of the kind, and upon its existence depended the scholarly labors of the students at the museum. It was here that classical philology had its cradle, and linguistic study received it first impetus.

From the beginning, there was a second library at Alexandria, though much smaller in extent. It occupied the temple of Serapis, and its relation to the larger library resembled that of a city library to a university library.

Under the direction of distinguished scholars and able organizers the larger institution grew with rapidity. Its history during this period has become better known through a papyrus discovered a few years ago. The eagerness of the library au-

thorities to secure new books and rare books sometimes led them to adopt devices that would not be countenanced by modern ethics. 80 keen was the rivalry with the library at Pergamon, that the Egyptians tried to hamper the latter's growth by a rather futile embargo on the exportation of papyrus. Thereupon the people at Pergamon invented the book material which received its name from city—parchment.

Demetrius Phalereus reported that

in his day there were two hundred thousand rolls or volumes in the library at Alexandria. The poet Kailimachos, under Ptolemy II., reckoned their number at nearly half a million. When the library was burned in 47 B.C., it was supposed to contain seven hundred thousand books, while the library at the Serapeion, in the same city, contained 42,000.

After this fire, which destroyed most of the books, which Caesar had already stored on the wharves for transportation to Rome, Antony presented Cleopatra with the library of Pergamon. In 272 A.D. the museum library was destroyed, and in 381 A.D. the same fate overtook the library at the temple of Serapis. The story of their destruction by the Arabs is a myth .- Prof. William V. Wyss in the Neue Zurcher Zeitung. (Zurich, Switzerland).

Films Explain Tick Eradication.

From 1,500 to 2,000 persons living in rural districts in the United States, often remote from railroads and cities, are each week seeing government motion pictures dealing with the eradication of cattle ticks and related subjects. The bureau of animal husbandry, has a portable motion-picture outfit which is constantly on circuits in parts of the south where preliminary tick eradication is being conducted. Preliminary work consists in the explanation of the purpose and benefits of eradicating cattle-fever ticks which in the past have taken an enormous toll from the live stock industry. Depending on weather conditions and density of population, attendance ranges from 75 to 350. Showings are made during the day and evening. To many persons the first ones they have seen.

Record Gold Nuggets.

The largest gold nugget ever found came from Chile, weighed more than 400 pounds troy, and was worth nearly \$100,000. The second largest, weighed 224 pounds, was mined in Ballarat, Australia, in 1859. The third largest was picked up at Carson Hill, Calaveras county, Calif., in 1854. Mt was a lump about 15 inches long, 6 wide and 4 thick, weighed 195 pounds troy, and brought more than \$43,000.

French Ravine, Sierra county, Calif., was a perfect nest of big nugsets. A \$5,000 one was found there in 1850, an \$8,000 one in 1851 and a \$10,000 one in 1855—thus proving that in mining lightning sometimes does strike more than once in the same place.

Safety at Sea.

It is announced that Professor Langevin of the College de France, who did valuable work during the war as director of physics in the artillery department at the ministry of war, has invented an apparatus which will enable vessels at sea to discover the presence of obstacles beneath the surface and to ascertaian at any moment without sounding the precise depth of the water. It will be necessary only for the wireless operator on board to press a button controlling this device in order to have the information before him.

Irreverent Bolshevikt.

A mock trial took place at the Garrison Club, Moscow, on January 27, in which God figured as the accused, according to dispatches from that city. Five thousand Red army officers and soldiers witnessed the trial, Leon Trotzky and Secretary Lunatsharky participating. Evidence was presented for and against God, as a counter-revolutionary power, and speeches delivered by the "defense" and the "prosecution." At the end of the proceedings a verdict of "guilty" was announced

Killed in Peculiar Accident.

While watching a hockey game at Portland, Me., a man had his jugular vein severed by the skate of a player whether they both shall be alike over the boards as two players coland bled to death. He was leaning lided, the skate of one striking him just below the ear.
