

MARS NEAREST TO THE EARTH ON AUGUST 22ND.

On Aug. 22nd the planet of Mars will be at its nearest opposition to the earth in all time. It comes within 35 million miles of the earth, and astronomers and scientific men are inclined to believe that sensational information of the planet will be available. Efforts to signal the planet; to determine whether the planet is inhabited are being made. These two views of Mars and the astronomical chart show the positions of the Earth, Sun and Mars on Aug. 22nd.

Mars made from an observatory in France. The picture on the left

shows the planet as it appeared last October. The dark long oblong within the light area is the Solis Lacus and the smaller dark spot is L. Phoenix.

To the right is a view of Mars taken five days later. The canal Ganges, which is seen running straight down to the left darkest dot, was very faint.

Below is an astronomical chart showing the relative positions of the Earth, Sun and Mars on Aug. 22nd. Mars will be 35 million miles from the earth, while at the other extreme of their orbits the two planets are over 200,000 miles apart.

The money bags show how rapidly the radio industry has grown in practically five years, or even less, of existence, so far as popularity is concerned. Yet it is only starting, as the comparison of homes (above) shows.

The Tourist Travel to Charleston Greater Than Ever Before.

Charleston, Aug. 18.—Every summer brings a large number of tourists to Charleston but this summer has surpassed anything in its history. Cedar Lake has had an average of fifty guests while the Harbor View house is receiving its share of patronage.
