FIG. 2

**Tickler Detuning—How to Minimize It**

Listeners owning regenerative sets incorporating a tickler for securing regeneration have often noticed that movement of the tickler changes the tuning of the secondary circuit, and that after a tickler adjustment it is usually necessary to retune with the secondary condenser.

Sometimes this effect is very marked, so great, in fact, as to be a great inconvenience, and readers will be interested in knowing how this detuning effect may be minimized. The main cause of all such tickler trouble is that the tickler is coupled to the grid side of the secondary coil, as shown in Fig. 1. You are all familiar with the so-called hand-capacity effect. In this case, if special precautions are not taken to avoid it, the presence of your hands in close proximity to parts of the set—notably the coils and tuning condensers—will have a decided tuning effect. In fact, many listeners are in the habit of using hand-capacity as a sort of vernier adjustment, changing the tuning slightly one way or the other by varying the position of their hands with respect to the set.

Now the tickler can be considered as a "hand" as far as capacity effects are concerned. The "grid" side of the secondary is extremely sensitive to any capacity effects, and if we couple our tickler to this grid side it can easily be seen that movement of the tickler is going to affect the tuning in much the same fashion as though you put your hand down in among the coils.

The remedy is shown in Fig. 2. Here the tickler is connected in the plate circuit in exactly the same manner as it is in Fig. 1, but we have coupled it to the filament side of the secondary coil instead of the grid side. This filament side is grounded, and therefore is not particularly sensitive to capacity effects. Movements of the tickler, then, will have far less effect on the tuning of this coil, and in some cases the tickler can be adjusted without affecting the tuning in the slightest.

Tomorrow we will give some more information as to the correct installation of the tickler.

**RADIO BROADCASTING**

WEDNESDAY, AUG. 27.

**KYW (588) Chicago, Ill.**  
6 to 6.30 p.m.—Dinner concert, broadcast from the Congress Hotel.  
6 to 6.10 Joska DeBabary's Orchestra.

young mothers' programme, with instructive talks. Market and weather reports.

4-5 p.m.—Moonlight instrumental trio; Mary Almour, dramatic soprano.

6-10 p.m.—Dinner music from the rose room of the Hotel Waldorf-Astoria.

Complete radio programmes sold at Canada Radio Stores.

**WHY THE WEATHER?**

DR. CHARLES F. BROOKS  
Secretary, American Meteorological Society, Tells How.

**Damp Cellars.**  
Perhaps you wonder why your cellar stays so damp in summer, and why it often fails to dry out, even when the doors and windows are opened wide on hot, sunny days. Where does the moisture come from?

Of course, after heavy rains, water may leak in from the ground, but most of the dampness is condensed out of the warm outdoor air, which is introduced to dry the cellar. On hot, muggy days, the dewpoint of the air may be 60 degrees Fahrenheit, or even 70 degrees, well above the temperature of the cellar walls and floor. Dew, then, will form on the floors, walls, and particularly on the cold water pipes, just as it would on a glass of cool water. A certain bank, one hot day, found its safe deposit vaults, ventilated by a system of fans, getting very damp. On this day the dewpoint was 70 degrees Fahrenheit, and the temperature in the vaults about 65 degrees.

To dry the vaults, the fans were speeded up, which only brought in more warm air carrying more moisture. The safe doors rusted and the floors became slippery and wet. If you would have your cellar as dry as possible, keep it tightly closed on hot, moist days, though the sun may be shining. But on a cool, dry night, or cool, cloudless day with a northwest wind, ventilate it thoroughly.

**A WHOLESALE CLEAN UP.**

Hotels at Alexandria Bay, N.Y., Raided for Liquor.

Alexandria Bay, N.Y., Aug. 26.—Five bands of raiders, composed of border patrolmen, state troopers and members of Sheriff William Button's posse, entered Alexandria Bay Saturday night, and made five raids, netting one of the largest captures of beverage made in the north country in some time, and resulting in the arrest of five hotel and restaurant proprietors.

Those arrested were Captain Samuel Massey, proprietor of the St. Lawrence Inn; Mrs. Myrtle Handley, who conducts a restaurant; Morris Lantier, another restaurant owner; Clay Kepler, of the Keppler Bottling works, and Barney Miller, whose mother owns the building in which the Rathskeller, formerly operated by White & O'Dowd, is located. Miller is charged with possession of a revolver and resisting an officer. The others face the usual prohibition charges.

**Cruel Horseman Fined.**

Brockville, Aug. 26.—For having twisted the tongue of a balky horse so severely that the ligaments were torn, Donat Mayor, Manchester, N.H., a horseman employed at the Brockville fair, was fined in police court on complaint of the Humane Society.

A girl baby was left in the vestibule of the London War Memorial Hospital. There was no clue to its parentage.

**PROBS:—Wednesday, scattered thunderstorms, but mostly fair and warm.**

**FLOOR RUGS**

NEW DESIGNS PUT ROOMS IN AUTUMN READINESS

As Autumn days grow grey and cheerless, one looks for cozy comfort indoors. A friendly lamp, a comfy chair, a soft, yielding Rug beneath one's feet. And of these a Rug can best of all make a room look hospitable.
