Only Pasteurized Milk is Safe

PROMINENT health authorities have agreed for years that only PASTEURIZED milk can be guaranteed absolutely safe. In cities where milk is not pasteurized, there is a tendency towards a higher death rate from Typhoid and Scarlet Fever than in cities where all milk is pasteurized. It is natural, therefore, that in furnishing Kingston with a better and safer milk service, Hemlock Park Dairy should include pasteurization as its greatest measure of precaution. Pasteurizing is simply a scientific process of heating and cooling milk, with the aid of accurate, costly equipment and under expert supervision, so that, during the process, all harmful bacteria are positively removed. (Only through pasteurization can this assurance be given.) Pasteurizing simply makes milk safe. IT DOES NOT alter its nourishing values

in any way, remove cream or affect its taste. IT DOES make it more digestible and gives it the power to keep sweet longer.
