EASTWOOD & SKINNER.

Toronto, Nov. 18th, 1834.

PROSPECTUS

OF A TREATISE ON AGRICULTURE, ADAPTED TO THE CLIMATE AND CIRCUMSTANCES OF CANADA.

A BOUNTIFUL Providence has furnished Canada with inexhausted resources of wealth in her most fertile soil & climate which is by no means unfavorable to Agriculture. The due improvement of these, & other natural advantages, is capable of giving riches and every reasonable enjoyment to her present, and a vastly increased population.

The importance of Agriculture to Canada, must be obvious to every one capable of forming a sound judgment in such matters. It is Agriculture that must afford the direct supply of all her greatest wants. It must in this, and in every other country, be the parent of Manufactures and Commerce, and the best means of promoting civilization and population; consequently it ever will be the most universal and useful of arts. In almost all nations, the most powerful individuals derive their wealth and consequence from their property in land, cultivated and managed by the husbandman.

Agriculture, therefore and agriculture alone, can support us without the help of others, in certain plenty, and real dignity. While our ground is covered with corn, and cattle, we can want for nothing. Manufactures and delicacies that we may require from without, corn and cattle will purchase, if we will only raise them in abundance, and excellence.

From the importance of Agriculture, and the great interest that is consequently felt on the subject, in the British Isles, and other countries of Europe, a varied and voluminous mass of knowledge has been accumulated, which would be most useful to every one who would wish to practice the art with success himself, or understand when well practiced for him by others. To combine as far as practicable the portion of this knowledge which I conceive to be most useful and necessary for the study of the Canadian Agriculturist, is the object of the treatise which I have now nearly ready for the press, and the plan of which I submit with great deference to the consideration of all those engaged in the art. The sources from which I have made selections, are the modern British and French Authors, of decided reputation and merit, with my own observations and experience, during my early years in the occupancy of extensive farms in Ireland, chiefly as a Grazier, & for a period of nearly seventeen years that I have been a farmer in Canada. Several years of the latter period I have had the honor to be Secretary to the District and county of Montreal Agricultural Society.

I propose to publish the work in four or five parts.

The first part will give a short view of the origin, progress, and present state of Agriculture, among some of the ancient and modern nations, particularly Great Britain, France, Flanders, the United States, &c. I am aware the past state of Agriculture can do little more than gratify the curiosity.

Not so its present state, which is calculated both to excite our curiosity, and affect our interests.

There is probably no country which I shall refer to, that does not possess some animal or vegetable production, or pursue some mode of culture, or management, that might be beneficially introduced into Canada: but with the exception of the counties I have named, and parts of Italy and Switzerland, there are no very interesting Reports of Agriculture, of other parts of Europe, with which I am acquainted at present.

The second part will exhibit a concise view of the science of agriculture, and the principles on which the operations and results thereof are founded.

The third, and remaining part, will apply those principles to the practice of agriculture, adapting them to the climate and other circumstances of Canada; and conclude with a few observations on that portion of the trade and commerce of this country in which farmers may be directly or indirectly interested.

Convinced as I feel, that the produce or agricultural is the only riches that the people of this country can call their own, and which they can never be deprived of, it has often astonished me, that men of liberal education should, in general, appear so little to regard its improvement or prosperity—in fact it is treated as a subject quite remote from common life, by nearly all who are not immediately engaged in it. They perhaps cannot allow themselves to believe that agriculture alone can furnish the means by which trade and commerce can be carried on successfully in Canada.

I sincerely hope to induce all who may take the trouble of reading my book, to reflect on the subjects I shall submit for their consideration, and that they will join heartily in promoting necessary improvements, and thus advance the wealth and prosperity of the land of their birth, & of the choice.

As a work of this description cannot be published in English and French without incurring considerable expense, it would be necessary for me to have as many subscribers as would insure my expenses. Subscription lists will be left at the several Book-Stores in Montreal. The work, I expect, will not exceed four parts, at 1s. 3d. each part. The first part to be published when there are a sufficient number of subscribers. I expect the whole might be published before the first of May next.

The four parts will contain from 250 to 300 pages, and may be bound in one volume. I shall do all in my power to make the book worthy of the patronage of all who desire to promote the prosperity of Agriculture, as well as of those who practice the art.

Wm. EVANS.

Cote St. Paul, Dec. 18, 1834.

Fresh Teas, Wines, &c. &c.
