DR. BARKER'S LAXATIVE PILLS. OF the numerous diseases to which the human frame is liable, there is

scarcely one, the symptoms of which are not seriously aggravated by a confined state of the Bowels, and TO THIS ALONE many owe their origin and continuance. The preserving the alimentary Canal free from obstruction, is a point of such primary importance, that every degree of neglect is followed by more or less of inconvenience or suffering. When habitual costiveness prevails the cheerful vigor of health is soon impared, sometimes by slow degrees, and at other times more rapidly, diseases make their inroads on the constitution; and in numberless instances, particularly where the habits are sedentary, or where free living is indulged, permanent ill health is the painful result. It must be obvious to the most superficial observer, that when the functions of nature now alluded to are not performed with due regularity, assistance must be obtained from art. Aperient Medicines then be-

played? The list of Aperient Medicines is numerous, but their effects on the system vary considerably; some exercise their influence chiefly on the exhaliant vessels, or on some part of the bowlets only, whilst the action of others extends more or less to the whole of the intestinal canal.
