From Punch. I'm a true English farmer-no, that's not the word; We don't mention it now, 'tis a name never heard ; No such people as farmers in these times there be-Agriculturists now, mun, is what they calls we.

HIBERNIA.

A COUNTRY CAROL.

Folks are growing Far too knowing. Much too fast for a fellow like me.

Our calling itself is no longer the same, It has got a new nature as well as new name : DOWN. The Rent payable on the 1st We must all study science, we husbandmen, now, And one need be a scottard to follow the plough. Sent to college,

Crammed with knowledge.

Taught the wherefore, the why, and the how. Time was when the farmer had no rule but one, The new-tangled inventions we now take in hand, I, for one, must confess that I don't understand. Werds restrainig. Ditching, draining.

Subsoil ploughing, all over the land,

Makes each fallow

I remember the time when the stable would yield

Physic swallow-All we poisons, I hope, is the slugs. Of acids and salts from the blue-bottle shops-

Draughts and potions, Washes, lotions, Pills and powders, to doctor the crops.

Well there, to myself I says often, says I, and-bye; And your wisearces find, arter all's said and done, That the old plan of farming, my bucks, is the one;

Drop reliance

On their science.

Only finishing where they begun.

ALLEGED CO-EXISTENCE OF MAN AND THE MEGATHERIUM. which, if confirmed, will set the geological world examined at a meeting hold in the house of Dr. S. forsil species thus accidentally associated. G. Morton, of Philadelphia, the eminent ethnologist. Professor Agassiz, Mr. George R. Gliddon, and several other paleontologists and archaelogists, were present. The fossil was pronounced to might be explained in the manner above suggested, be one of the pelvic hones of a man between the I found that Colonel Wailes, a friend of Dr. other fessilized remains of the megatherium, exentsion, and who has also made a fine collection megalonyx, and other primeval creatures. The specimen has been deposited in the nuseum belonging to the Academy of Natural Sciences at Philadelphia. Hitherto the remains of men have been found only in the lacustrine, peat-bog, and found. I have the honor to be. Sir, yours, &c., edier mendeter Copensia; und in congumenter with the A his most grateful thanks to the fossil remains of animals now existing. If this, however, be correct, we must carry him back to the era of the ossiferous gravels; and though these dering on the tertiary formation, and when a tropical climate existed in the present temperate found, may be, in point of fact, much later. If correct, it will occasion much discussion and

climate and crainfinitely more ancient than has To the Editor of the Times. Sir.-A considerable sensation appears to have been caused in the minds of the scientific, and part of the mescientific public, by the announcement in many of the newspapers of the discovery with the remains of the megatherium and other extinct quadrupeds. I have only just read in the last number of the Athenaum (December 5, 1846) a brief notice of the reported discovery, copied from an American paper, and which the editor has inseted with a judicious caution to his readers, JUST RECEIVED AT THE ATHENEUM prices—his motto being " hight profits and quick advocate for future patronage.

That no competent authority has yet vouched for all the facts. I feel sure that the story relates to advocate for future patronage. inominatum), which was shown to me at Natchez last spring, together with several very remarkable remains of megatheriod noimals. I visited Natobez in March last, on which occasion I was informed of the antiquity assigned to the human relic, and having examined excefully into the evidence, came to the conclusion that the proofs of the co-existence of the human individual with the megatheriod and other extinct quadrupeds found in the vicinity was altogether unsatisfactory. We are indebted to the skill and indefatigable industry of Dr. Dickerson, of Natchez, for having formed a splendid collection of organic remains, derived from the superficial deposits of that neighborhood. All these he had the kindness to show me, and afterwards accompanied me to the principal spots where they had been procured. One of these, distant about six miles from Nutchez, has been named by him the Mammoth ravine, from the skeleton of the mastodon discovered there; and it was there also that the fragment of the human pelvis supposed to have been contempraneous with the megatherium was picked up. In order to explain its position, a few words on the geology of the region will be indispensable. The broad, flat, allowial plain of the Mississippi is

bounded on its eastern side by a table land, about 200 feet higher than the river, and having a very gentle upward slope to the eastward, or towards the interior. This elevated platform ends abrubtly dance of fresh-water and land shells, of which I myself obtained more than 20 species, now in my testaces now inhabiting the same part of the United States. With these shells are found, at 5-3m. different depths, some in the loam, and some in this is one of them. But all nonor is due to the clay at the bottom of the loam, the scuttered Hardinge for so manfally resisting it.—Atlas. bones and occasionally entire skeletons of the mastodon, megatherium, mylodon, casteroides, all the able-bodied men in the several dockyards eques, bos, and other quadrupeds. If in any part to the use of the long guns and musketry, and to, of this formation, whether at the depth of 10 feet form them into an available corps to man the bator 100 feet, any remains of man lie buried by teries and block-ships in cases of necessity.

natural causes in undisturbed loam or clay, the antiquity of the human race is thereby established to an extent far greater than has ever yet been made out in any instance which I have had an opportunity of investigating. It would follow that the human race had survived the extinction of one group of terrestrial maromalia, and seen another succeed and replace it; and also that man had lived in North America when the geographical configuration of the country was very different; in other words, before the valley of the Mississippi, or even some of the struta forming its boundary rocks, were in existence. Every deposit entering into the composition of the bluffs of the Mississippi valley must be older than the alluvial plain and delta of that river; and we thus obtain, independently of any evidence attesting great changes in the animate world, a measure for estimating the minimum of time which has elapsed since the bloffs originated. For we must allow a sufficient series of years for the deposition of all the sedimentary forming the plain and delta of the great river. I have endeavored to calculate the period (one of enormous duration, relatively to the historical epock,) and explained my views un the subject in a lecture delivered to the British Association at their meeting at Southampton, and a correct, though incomplete abstract of that communication appeared in the Athenaum for

To come then to the mint-what proof is there that the geological position of the human pelviobone was such as to demonstrate its anteriority in date to the entire hydrographical basin of the Mississippi, and the formation of its allevial deposits and delta? The yellow shelly loam, or locas, before mentioned, extends for 12 miles inland, or eastward from the river : and in consequence of its incoherant and destructible nature, every streamlet flowing over its cuts out for itself, in its way to the Mississippi, a deep gully or ravine. The denudation has of late years proceeded with accelerated speed, especially in the course of the last 30 or 35 years. Some attribute the incresed emsive action to partial clearings of the native forest; others to the effects of the great earthquake of New Madrid in 1311-12, by which this region was much fisaired, ponds being dried up, and some land-slips caused. Colonel Wiley, a proprietor in this part of the state of Mississippi, and who well remembers the district before the year 1812, assured me that the Mammoth ravine, although now seven miles long, and in some parts 60 feet deep, with its numerous ramifications, has been entirely formed since that year, when the carthquake occurred. He has himself ploughed some of the land, exactly over the spot where the ravine is now situated.

September 26, 1846.

It is, however, enough for our present purpose to affirm that whatever be the date of the origin of this watercourse, it has of late years been considerably enlarged and lengthened, its banks presenting everywhere precipices, in which the loam, unsolidified as it is, retains its verticality, as is the case with its counterpart, the loess of the Rhine. Land shells are seen in great numbers at the depth of about 30 feet from the top, and the fossil bones of the mastedon, and other extinct quadrupeds, are usually picked up in the bed of the stream after they have been washed out of the undermined cliff's, where, however, some few have also been observed in situ. Under these circumstances, as I was given to understand, the human pelvis was procured at the base of the cliff. Even if it had been dug out in the presence of a practical geologist, it would have been necessary for him to be more than usually on his guard against deception, for land slides have detached large masses from the cliffs, and these may easily cover human bones previously washed down by the stream, or dislodged from the soil near the top of the cliff, where some old Indian graves, so common throughout the country, may have been undermined. It is not rare to find on shoals and on the shures of the IMPORTANT GEOLOGICAL DISCOVERY .- A dis- islands in the Mississippi, at low water, numerous covery is said to have just been made at Natcher, bones of man, mingled with those of extinct animule, washed out of the bluffs. In these cases the in a stir. On the authority of a private letter human bones are as black as the quadrupedal from Philadelphia, it is alloged that Dr. Dickerson, fossils, having been apparently stained with penty of that city, has exhumed, near Natchez, on the matter, in the soil where they were buried; but Mississippi, from the depth of 100 feet below the no geologist has ever ventured, on this evidence, to surface, a fossil human bone. The fossil was infer the contemporaneousness of man and the

After I had made up my mind that the remote antiquity of the human bone of Natchez was ques. tionable, and that its occurrence in the ravine ages of 16 and 20 years. It was found amongst Dickerson's, who accompanied us in part of our of the fossils of this neighborhood, not only shared my doubts, but had made the same conjecture respecting the probable manner in which the fossi may have been conveyed to the spot where it was

of great events. The mind almost staggers be-

which opens out before us-the stupendous mountain ranges, the multitudinous population, the them, the great deeds that are done, the enormus crimes that are committed. In India a blondy fracas in civilised Europe : a massacre of a few hundred people, including Prime Minister, a Lord Chamberlam, and a few Royal Highnesses, in Labore or Catmandoo, takes rank beside one of those bedchamber emeutes which overthrow Ministers in London. Everything is on a large scale. They count their money by hundred thousands, and their people by round millions. Elephants are to them what horses are to us; and alligators no nore than water rats. The recent intelligence from India, which arrived just in time to be too late for our last issue, partakes largely of this gigantic character. There is a great war in the romantic regions of Cashmere; there has been a sunguinary revolution among the mountains of Nepaul. Gholab Singh, the Sikh chieftain, a man of rare energy and courage, with whom Lord Hardinge entered into an alliance as the man of all others must likely to hold his people in subjection, finds it impossible to possess himself of Cashmere without first beating down the powerful opposition of a hostile Mahomedan population. At the head of his entire army, reinforced by 10,000 men drawn from Labore, he has marched against the insurgent hosts, and large bodies of British troops have been oushed forward to garrison those posts in the hill country which the necessities of Gholab Singh have stripped of their ordinary defences. Our Indian army finds winter quarters in strange places. A few years ago a detachment of British troops wintered among the fastnesses of the Hindoo Koosh; and now we find our regiments almost upon the borders of Thibet. Where all this will end it is hard to say. If it were not for the known moderation of Lord Hardinge, it would be easy to predict that the absorption of an immease tract of country would follow close upon the occupation of these remote points by British troops; but Lord Hardinge never has been moved by lust of conquest: and he will be only too happy to have an opportunity of withdrawing, without extending the limits of our already overgrown possessions in the East. But it might puzzle a greater man than the Governor-General to know how to withdraw. There is a class of politicians prodigiously wise after the event, which sets down all our present difficulties to the account of the defective policy of Lord Hardinge. It is said, with infinite sagacity, that if the Governor-General has absorbed the Punjub some time ago, all this would not have at Natchez, in a line of perpendicular cliffs, or happened. Conquestion of the what was happened. Unquestionably different causes would bluffs, the base of which is continuelly under. have produced different effects. But what was mined by the Mississippi. The vertical section are now erview out so levely against the opportunity of studying the composition and suc- absorption of Cracove, to be so sensitively alive to cession of the strate for a vertical thickness of an injury done to the cause of freedom in Europe, rather more than 200 feet. The whole deposit is of comparatively modern date, the upper 60 feet down the wind, a prey to fortune. We have consisting of clayey loam containing shells of recent species, and the lower of sand and graved garded as the friends of freedom. Let us take without organic remains, except some word and heed lest we lose it altegether. We are aware silestice corals washed out of older rocks. The that some political conceive that upon repairing yellow loam at the top bears a singularly close to a new quarter of the globe, they have as good resemblance to the fluviatile silt, or "loess," as a right to change their principles as their vesture -to adopt a lighter kind of moral garment, one it is termed, of the valley of the Khine, between Cologue and Basic, and, like it, contains abun. Robert Peel when Prime Minister of England, declared that there was "some great principle at work wherever civilization and refinement come. cabinet in London. They belong to the genera in contact with harbarism, which makes it imposrather replaced in a few places where the loam sible to apply the rules observed among more passes into shell marl, by lymnes, planorbis, physa, advanced nations; more especially when civiliza-and cycles. All the species are identical with
