Burnett's, and this too without producing any nuisauce like the smell of chloride of lime or carbolic acid.—I am yours faith-"S. Sidney, Sec. and Manager.

"Capt. Jackson, R.N., 90, Cannon street." This fluid acts on the essential cause of disease by destroying the local conditions of the atmosphere under which cholera is most frequently developed and propagated. For instance: "In a house in St. Andrew's street. Plymouth, occupied by fifty-two persons, it was sprinkled in every room except four; in these the occupants would not permit it to be applied; the result of which was, that in those parts of the house where it had been used, not a single case of cholera subsequently occurred; while in the four rooms above alluded to, the disease still exists and some deaths have taken place. Two houses immediately opposite were supplied with a quantity, in neitner of which has there been a single case, although the disease is raging

in the neighbourhood." Sold by all Chemists, and at 30, Canon street, London. Quarts, 16s; pints, 8s; halfpints, 4s; glass-stoppered Imperial pints, extra strength, 16s per dozen; and in bulk at 4s per gallon: bottles included. Each gallon making 200 gallons, when diluted with water. See directions on every bottle: Recommended and used by Professor Simonds at the Royal Veterinary College, during the last twenty years. N.B.—This fluid is a certain cure for grease in horses, also the scab and rot in sheep.
