KING SOLOMON'S MINES

A MOST ATTRACTIVE STORY.

CHAPTER VI. WATER! WATER!

In two hours' time, about four o'clock, I woke up. As soon as the first heavy demand of bodily fatigue had been satisfied, the torturing thirst from which I was suffering asserted itself. I could sleep no more. I had been dreaming that I was bathing in a running stream, with green banks and trees upon them, and I awoke to find myself in that arid wilderness, and to remember that as Umbopa had said, if we did not find water that day we must certainly perish miserably. No human creature could live long without water in that heat. I sat up and rubbed my grimy face with my dry and horny hands. My lips and eyelids were stuck together, and it was only after rubbing with an effort that I was able to open them. It was not far off the dawn, but there was none of the bright feel of dawn in the air, which was thick with a hot mizzle. I cannot describe. The others were still sleeping. Presently it began to grow light enough to read, so I drew out a little pocket copy of the "Ingoldsby Legends" I had brought with me, and read the "Jackdaw of Rheims." When I got to where—

"A nice little boy held a golden ewer, Embosset, and filled with water as pure As any that flows between Rheims and Namur."

I literally smacked my lips, or rather tried to smack them. The mere thought of that pure water made me mad.

As soon as we were all well awake we fell to discussing the situation, which was serious enough. Not a drop of water was left. We turned the water-bottles upside down, and licked the tops, but it was a failure; they were as dry as bone. Good, who had charge of the bottle of brandy, got it out and looked at it longingly; but Sir Henry promptly took it away from him, for to drink raw spirit would only have been to precipitate the end. "If we do not find water we shall die," he said.

"If we can trust to the old don's map there should be some about," I said; but nobody seemed to derive much satisfaction from the remark. It was so evident that no great faith could be put in the map. It was now gradually growing light, and as we sat blankly staring at each other, I observed the Hot-tent Ventvogel rise and begin to walk about with his eyes on the ground. Presently he stopped short, and uttering a guttural exclamation, pointed to the earth.

"What is it?" we exclaimed; and simultaneously rose and went to where he was standing pointing at the ground.

"Well," said I, "it is pretty fresh spring-brook spoor; what of it?"

"Springbrooks do not go far from water," he answered in Dutch.

"No," I answered, "I forgot; and thank God for it!"

This little discovery put new life into us; it is wonderful how, when one is in a desperate position, one catches at the slightest hope, and feels almost happy in it. On a dark night a single star is better than nothing.

Meanwhile Ventvogel was lifting his snub nose, and sniffing the hot air for all the world like an old Impala ram who scents danger. Presently he spoke again.

"I smell water," he said.

Then we felt quite jubilant, for we knew what a wonderful instinct these wild-bred men possess.

Just at that moment the sun came up gloriously, and revealed so grand a sight to our astonished eyes that for a moment or two we even forgot our thirst. For there, not more than forty or fifty miles from us, glittering like silver in the early rays of the morning sun, were Sheba's breasts; and stretching away for hundreds of miles on each side of them was the great Suliman Berg. Now that I, sitting here, attempt to describe the extraordinary grandeur and beauty of that sight, language seems to fail me. I am impotent even before its memory. There straight before us, were two enormous mountains, the like of which are not, I believe, to be seen in Africa, if, indeed, there are any other such in the world, measuring each at least fifteen thousand feet in height, standing not more than a dozen miles apart, connected by a precipitous cliff of rock, and towering up in awful white solemnity straight into the sky. These mountains standing thus, like the pillars of a gigantic gateway, are shaped exactly like a woman's breasts. Their bases swelled gently up from the plain, looking, at that distance, perfectly round and smooth; and on the top of each was a vast round hillock covered with snow, exactly corresponding to the nipple on the female breast. The stretch of cliff which connected them appeared to be some thousand feet in height, and perfectly precipitous, and on each side of them, as far as the eye could reach, extended similar lines of cliff, broken only here and there by flat table-topped mountains, something like the world-famed one at Cape Town; a formation, by the way, very common in Africa.

To describe the grandeur of the whole view is beyond my powers. There was something so inexpressibly solemn and overpowering about those huge volcanoes—that it fairly took our breath away. For awhile the morning fights played upon the snow and the brown and swelling masses beneath, and then, as though to veil the majestic sight from our curious eyes, strange mists and clouds gathered and increased around them, till presently we could only trace their pure and gigantic outlines swelling ghost-like through the fleecy envelope. Indeed, as we afterward discovered, they were normally wrapped in this curious gauzy mist, which doubtless accounted for one not having made them out more clearly before.

Scarcely had the mountains vanished into cloud-clad privacy before our thirst—literally a burning question—reasserted itself.

It was all very well for Ventvogel to say he smelled water, but look which way we would we could see no signs of it. So far as the eye could reach there was nothing but arid sweltering sand and karoo scrub. We walked round the hillock and gazed about anxiously on the other side but it was the same story, not a drop of water was to be seen; there was no indication of a pan, a pool, or a spring.

"You are a fool," I said, angrily, to Ventvogel; "there is no water."

But still he lifted his ugly snub nose and sniffed.

"I smell it, Haas" (master), he answered; "it is somewhere in the air."

"Yes," I said, "no doubt it is in the clouds, and about two months hence it will fall and wash our bones."

Sir Henry stroked his yellow beard thoughtfully. "Perhaps it is on the top of the hill," he suggested.

"Rot," said Goad; "I never heard of water being found on the top of a hill!"

"Let us go and look." I put in, and hopelessly enough we scrambled up the sandy sides of the hillock, Umbopa leading. Presently he stopped as though he was petrified.

Presently he stopped as though petrified. "Nanzia manzie!" (here is water), he cried with a loud voice.

We rushed up to him, and there, sure enough, in a deep cup or indentation on the very top of the sand koppie was an undoubted pool of water. How it came to be in such a strange place we did not stop to inquire, nor did we hesitate at its black and uninviting appearance. It was water, or a good imitation of it, and that was enough for us. We gave a bound and a rush, and in another second were all down on our stomachs sucking up the inviting fluid as though it were nectar fit for the gods. Heavens, how we did drink! Then when we had done drinking we tore off our clothes and sat down in it, absorbing the moisture through our parched skins. You my reader, who have only to turn on a couple of taps and summon "hot" and "cold" from an unseen vasty bod, can have little idea of the luxury of that muddy wallow in brackish tepid water.

After awhile we rose from it, refreshed indeed, and to our "bitlong," of which we had scarcely been able to touch a mouthful for twenty-four hours, and ate our fill. Then we smoked a pipe, and lay down by the side of that blessed pool under the overhanging shadow of the bank, and slept till midday.

All that day we rested there by the water, thanking our stars that we had been lucky enough to find it, and as it was, and not forgetting to render a due share of gratitude to the shade of the long-departed Da Silvestra, who had corked it down so accurately on the tail of his shirt. The wonderful thing to us was that it should have lasted so long, and the only way that I can account for it is by the supposition that it is fed by some spring deep down in the sand.

Having filled both ourselves and our water bottles as full as possible, in far better spirits we started off again with the moon. That night we covered nearly five-and-twenty miles, but, needless to say, found no more water, though we were lucky enough on the following day to get a little shade behind some ant-hills. When the sun rose and, for awhile, cleared away the mysterious mists, Suliman's Berg and the two majestic breasts, now only about twenty miles off, seemed to be towering right above us, and looked grander than ever. At the approach of evening we started on again, and, to cut a long story short, by daylight next morning found ourselves upon the lowest slopes of Sheba's left breast, for which we had been steadily steering. By this time our water was again exhausted and we were suffering severely from thirst, nor indeed could we see any chance of relieving it till we reached the snow line far, far above us. After resting an hour or two, driven to it by our torturing thirst, we went on again, toiling painfully in the burning heat up the lava slopes, for we found that the huge base of the mountain was composed entirely of lava beds belched out in some far past age.

(To be Continued.)

The Opinion of All Who have tried Polson's Nerviline, the great pain remedy, is that it is never failing in pain of every description. Neuralgia, toothache, cramps, pain in the stomach, and kindred complaints are banished as if by magic. Rapid and certain in operation, pleasant to take, Nerviline stands at the very front rank of remedies of this class. A trial bottle may be purchased for 10 cents, a very small amount in any case; but the best expenditure you can make, if a sufferer from any kind of pain, is a 10 or 25 cent bottle of Nerviline at druggists, and country dealers.

Why will you suffer with a bad cold when a few doses of West's Cough Syrup will cure you. Invaluable for all throat and lung troubles. Consumptives, try it. Small size 25c., large bottles \$1.00. All druggists.

When Lord Salisbury, then Lord Robert Cecil, was cast off by his enraged father because of his marriage with Miss Anderson he fled for refuge and advice to Sir Stafford Northcote. The baronet put the poverty-stricken lord in the way of supporting himself by writing for the press, at which he was glad to earn the modest stipend of about \$1,000 a year.

A Cure for Drunkenness. Opium, morphine, chloral, tobacco, and kindred habits. The medicine may be given in tea or coffee without the knowledge of the person taking it if so desired. Send 6c in stamps, for book and testimonials from those who have been cured. Address M.V. Lubon, 46 Wellington St. East, Toronto, Ont. Cut this out for future reference. When writing mention this paper.

While a jeweller was chatting to a New York reporter a colored lady, attired in the latest devices of fashion, purchased a brilliant and planked down \$250 without a murmur. "Some of our best customers are colored people," said the jeweller. "When they have money they wear good clothes and good jewelry. Diamond earrings are set off better on a dark background, and the colored ladies understand it."

Wonderful is the effect of West's World's Wonder or Family Liniment. One bottle will effect more cures than four times the number of any other liniment. 25 and 50c. All druggists.

A Good Name. The best recommendation of anything is its popularity where it has been longest known. Throughout the Dominion of Canada there is no more effectual medicine for coughs, colds, hoarseness, sore throat, bronchitis, asthma, than Hagar's Pectoral Balsam, for sale by druggists.

QUESTIONS AND ANSWERS.

Curious Queries on Many Subjects Carefully Answered.

What was the origin of the Spanish nation. X.

From remote antiquity the elevated regions in the interior were peopled by the Celtiberians, a race formed by a mixture of Celts and Iberians. The Phoenicians came next, then the Greeks, who applied the name of Heia, which was changed by the Romans to Hispania. After the first Punic war the Carthaginians established themselves in Spain. The Greek colonies applied to the Romans for aid against the Carthaginians. Scipio, a Roman general, expelled the latter in 209 B.C. and finally the Romans conquered the whole country. When the Roman power declined the Germans appeared in Spain. It was shared by the Visigoths, and still later on by the Moors. Christian and Mohammedan contended till Granada, the last Moorish province, yielded to Ferdinand and Isabella.

The Machinist's Trade.

Will you please oblige me by stating if there is an institution in the United States where the machinist's trade is taught. R. S.

The Stevens Institute of Technology in Hoboken, N. J. The Rose Polytechnic Institute at Terre Haute, Ind. There is also a similar institution at Cincinnati. At New York and Chicago there are training schools for boys.

Bunker Hill.

Who won the battle of Bunker Hill, the English or Americans? W. T.

The Americans were driven from their redoubt on Bunker Hill, and the British remained in possession of the ground; yet the loss of the British was so great that the moral effect was in favor of the Americans.

Theory of Tides.

Please state why the tide rises and falls. A.

The most probable theory is as follows: Suppose the earth to be a smooth sphere covered with water of uniform density. The attraction of the moon on the pliable water nearest to her would be greater than on the solid earth, causing a heaping of the water toward her. So far the matter seems very simple, but there is also another heaping up of water on the opposite side of the globe at the same time. This is explained by the fact that the water on the side away from the moon is attracted less than the solid earth, and the earth is therefore thrown away from the water, thus causing the water to be heaped up, though not so much as that directly under the moon on the opposite side. The sun has two-fifths as much influence on the waters as the moon. But since the earth revolves on its axis, and the moon at times acts in a direct line with the sun, and at times in a contrary direction, these motions never give the waters time to take a spheroidal shape as they would do when at rest. An imperfect form of it travels around the earth in a lunar day, and the tide rises later as the moon does. When the sun and moon attract in the same direction we have the highest tides and vice versa.

A Question of Right.

Not long ago, while on a visit, I became acquainted with a young lady, and on my return home began a correspondence with her. She has written me to address my letters to an assumed name, as she fears her father may object if he discovers our correspondence. Now, I don't wish to offend her father or act dishonorably. Yet I wish to continue our correspondence. What shall I do? JOHN T.

There may be special circumstances which render it essential for her to ask you to act clandestinely, but on general principles we should say that there is a want of strength of character in the young lady. Most women of high principle would correspond openly or not at all.

Please state: 1. If President Johnson was impeached 2. Give the name of our currency which is a legal tender 3. How many cities of the United States have elevated railroads? B. C. H.

1. No; a two-thirds vote was required, but was not secured. 2. All United States currency is legal tender. 3. New York and Brooklyn. Some other cities have cable roads leading to bluffs.

Locke's Moon Hoax.

What was Locke's moon hoax? I have frequently seen it referred to, but do not know what it is. S. P. W.

A newspaper hoax perpetrated in 1831 in The New York Sun. The author was Richard Henry Locke. It was known that an eminent astronomer, Sir John Herschel, was at the Cape of Good Hope, with instruments of great power. The article in The Sun purported to be his observations of the Edinburgh Journal of Science. It was a very imaginary account of Herschel's observations, which they declared to be a seven-ton glass, describing Lunar scenery as if it had a hundred yards away and Lunar inhabitants like men. After having been nearly everywhere in America it was published in England, where it met with almost equal success, and was even discussed in the French Academy of Sciences. It was, in fact, read all over Europe.

Presidential Candidates.

Two of the candidates for the names of the president, 1880, are: Doolnick.

The Democratic national convention met at Chicago, Ill., and adjourned to meet at Baltimore, where it remained 27 days. A. Douglas and Herschel A. Johnson. The Constitutional Union convention met at Baltimore and nominated John Bell and Edward Everett. The Republican national convention met at Chicago and nominated Abraham Lincoln and Hannibal Hamlin. The Democratic convention composed of seceding delegates to the Charleston convention met at Baltimore and nominated John C. Breckinridge and Joseph Lane.

Castle Garden.

How did the emigrant station Castle Garden derive its name, and what was it formerly used for? A. G.

It was originally built in 1697 for a fortification. Later it was converted into a place of amusement. Jenny Lind, Fontaine, Mario and Oriani and other notables in the musical world sang there. Its circular form and its location now—what was formerly the park of New York—the Battery, gave it the name of Castle Garden. It was originally built out in the water. Some thirty years ago the intervening space was filled and it is now on the mainland.

The Great Eastern.

Can you tell us what has become of the mammoth steamship the Great Eastern, which was so much talked about more than twenty years ago? H.

The Great Eastern was after a long hull and used in laying the Atlantic cable, was run for a while between England and Australia. She is now employed as a refrigerating ship for the transportation of meats from South America to England.

Balfour Burleigh has been appointed British under-secretary for the colonies.
