Important Invention.

Mr. W. H. Preece, the telegraphic ex-

pert of the post-office, had a surprise in store for his audience at Toynbee Hall on Saturday night, when he lectured on "Telegraphy Without Wires." There is, of course, nothing new in the fact of being able to communicate without wires. but toward the close of his lecture, Mi Preece announced that a new invention, which might have the widest possible influence not only on the future of tele-Reading N closs, 15c. per line; reduced rate with tuberculosis has been for a long time bewhen a d splay advertisement accompanies, or one intracts for over 500 lines. New York reports a case of b'ood poisonNew York reports a case of b'ood poisonNew York reports a case of b'ood poisonNew York reports a case of b'ood poisonconi, a young Italian electrician, came to him recently, he said, with a system of telegraphy without wires, depending not on electro-magnetic, but on electrostatic effects—that is to say, on electric waves set up of a much higher rate of vibration, 250,000,000 a second in fact. These vibrations were projected through space in straight lines, and could be reflected and refracted like light-indeed, they were capable of all the phenomena which light was allowed to go through. mented with on the roof of the postoffice, and then for three-quarters of a mile on Salisbury Plain. Mr. Marconi was present that night, and this was the first occasion on which the apparatus had been shown, except to government officials. The great difference between the system which had already been tried required. Vibrations were simply set up by one apparatus and received by the other, the secret being that the receiver must respond to the number of vibrations of the sender. The apparatus was then exhibited.

What appeared to be just two ordinary boxes were stationed at each end of the deception," Mr. Marconi held the receiver and carried it about, the bell ringing whenever the vibrations at the other box were set up. Continuing, Mr. Preece said he had had the greatest possible pleasure in telling Mr. Marconi that day that the post-office had decided to spare no expense in experimenting with his devices which were highly novel and written about Prof. Bose, who, beyond way of communicating with lightships Since last year they had had a cable with the Fastnet light, the first light seen by Atlantic voyagers, but in the early part of this year it broke down. and they had never been able yet to land there was a possibility beyond this of enabling ships as they came near dangerous rocks and shallows to receive an and if the invention was what he believed it to be, our mariners would have been given a new sense and a new friend, which would make navigation infinitely easier and safer than it now

Blondness of Mountaineers. Our final example, tending to prove

disturb racial equilibrium in the color of the hair and eyes, is drawn from Dr. Livi's monumental dreatise on the anthropology of Italy. XIn entire independence of my own inferences, he arrived at an identical conclusion that blondness, somehow, is favored by a mountainous environment. From a study of 300,000 recruits, he found that fourteen out of the sixteen compartimenti into which Italy is divided conformed to this law. peace at Riverview. John Maloney, sr., There was generally from four to five Audrew Ryan, brother of William and again to consider the contrasts in the greater blondness in the mountains. It is in the South of Italy that the two work in opposition, and here we turn for test of our law. In the South the mountains should contain the Mediterranean brunette type in relatively undisturbed purity, for the Northern blondes are more frequent in the attractive districts open to immigration. Even here, in many cases, this racial probability is reversed or equalized, by some cause which works in opposition to race, se that we find comfort at every turn. The law which we have sought to prove

is not radically new. Many years ago Waitz asserted that mountaineers tended
