things the workingman has had to and erected over the gate. It is by buy, for all the century, year by no means bad or untrue to present year. The fluctuations in wages of day art. To the eye of mankind in workingmen for the past 25 years general there can be nothing much occupy another and most interesting chart. The changes are indicated by a black line curving up and down Five trades have been selected as the These are building, mining, engineering, textile fabrics and agriculture. We find from the map that the general tendency of all wages in the United Kingdom has been upward and that wages in the engineering branch have gone steadily upward, this, too, quite apart from

pendent and prosperous or the retogether, is apparent in the connection between the memorable strike of 1879 and the coal famine in England in the winter of 1899-1900. It required a year for the British iron and steel industry to steady itsuch as had never been known be to say. fore. The busiest and most prosperous year in the English machinist trade since the records have been kept was 1899, and the busiest part | Palace of Electricity. The illustraof the year was the latter part, after the breaking out of the Boer war.

Meantime the coal mining industry had been jogging on at its usual pace. To a dot the amount had the scene. What can be done with country in ordinary years, and that never dig more if they can help it, employers have a large stock on hand they feel too independent of the miners and at liberty to discharge them or cut down

Paris Exposition-Frieze on Main Build-

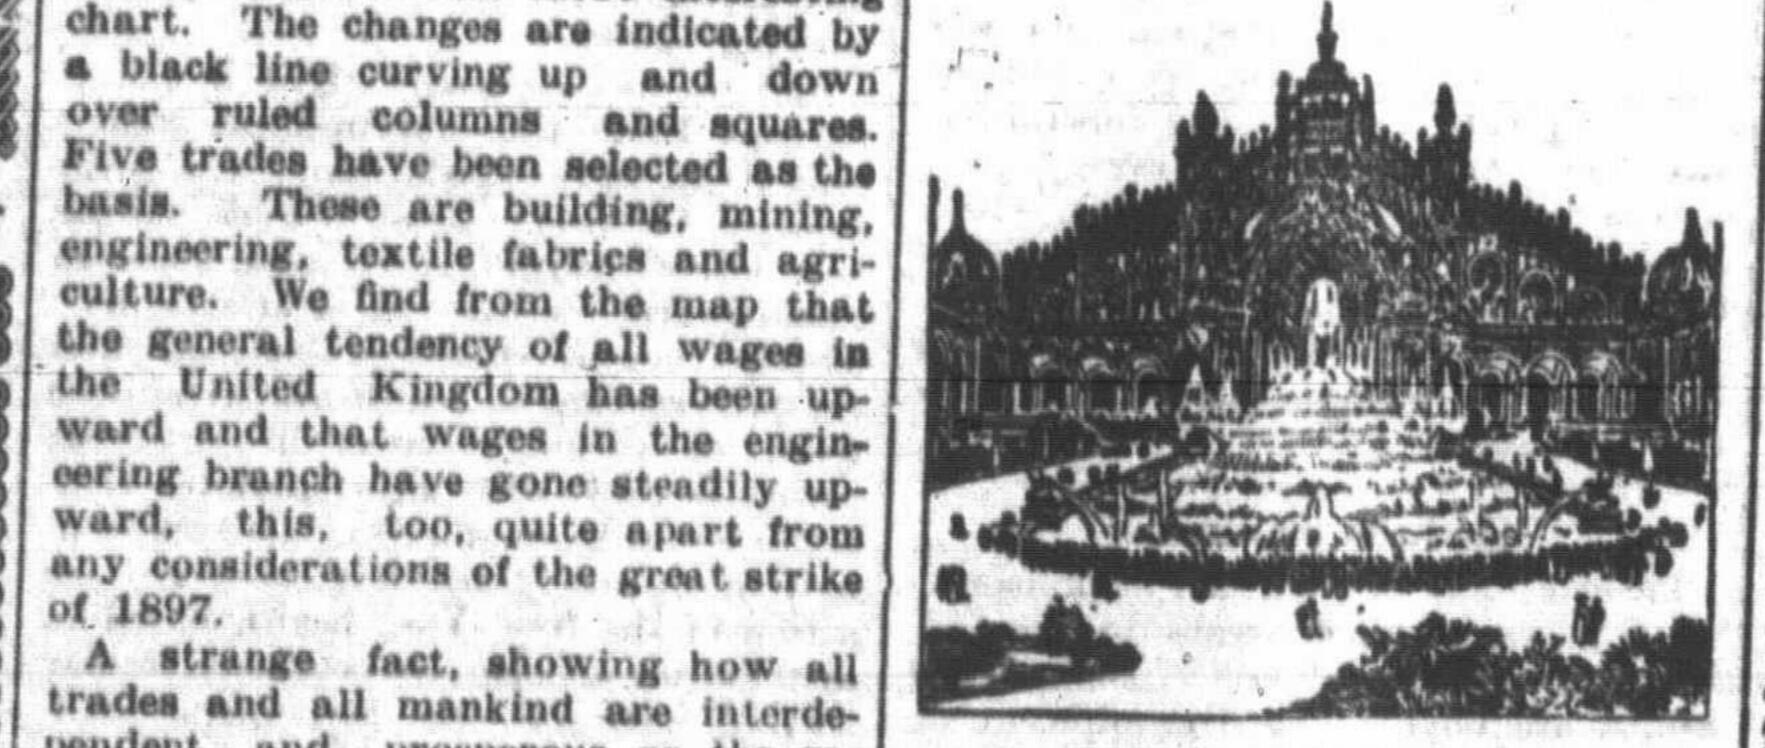

there was also increased demand for fuel for domestic purposes demand for coal in the iron and steel trades, which were behind on account of the strike, and the domestic fuel requirements coming simultaneously with the outbreak of the Boer war, created a cry, not to say a howl, for coal and sent the price up to a point where it made poor people's heads spin. It was not because the coal in Great Britain is becoming exhausted; not at all. A whole chapter of useful information may be obtained from the chart showing the general effect of labor strikes on the cash in hand of mechanics. The merciless curve line indicates unerringly that strikes and labor disputes on the whole work against the mechanics engaged therein and not in their tayor But the charts prove means a particularly flexible chain is that the condition of workingmen, obtained, and one which can be used take it all around, is gradually but for a great variety of purposes, surely improving.

of any since statistics have been kept. So that if England had the latter part of the year she had meet it than she would have had a

year earlier. Cheerful charts are those showing men These increase steadily, fall off a little in bad years, but pick up and go on again better than ever after operation are the remedy for all inwustrial troubles. Only the hapless farm laborer of Great Britain is unable to co-operate much, we find. His wage is so small that he cannot

BALL BEARING CHAIN.

Spheres Inserted Between the Links to Prevent Prietion.

Ball bearings, which first became generally familiar through their use in bicycle bearings, have now be come part of innumerable mechanical contrivances. Wherever it is desired to reduce friction to a minimum, or to obtain a particularly easily movable part a ball-bearing is introduced so that they are found in everything, from a car axle to a chair castor. Inventors have racked their brains in an endeavor to find new adaptations of this principle, and one of the most recently evolved, a ballbearing chain, designed by a Pittsburg patantee, Robert A. Carter, is Bringing the fruits of their labor to the illustrated here. As shown, the links are provided at one end with a conwages. As the year grew older and which the steel ball is placed.
