Made Light But Strong.

The Stearns construction places strength where it is needed and gives lightness where possible.

The reinforced crankhanger construction of the Stearns is the lightest, strongest combination ever put into a wheel. It is so strong that the Stearns tread is made the narrowest on the market.

The Stearns seatpost lug is made of only one kind of metal. The rear forks are let into the mast tubing and all . parts are brazed together. There is no lighter construction. Stearns Light Roadsters \$50 only.

The Standard Chainless.

We have twelve chainless bicycles among the National wheels, and the Columbia Chainless is the standard. The large gear wheel is always true. It is the hardest gearing to make in all chainless wheels. But in the Columbia Chainless it is of such a shape that in tempering it shrinks into its proper scientific form. And it is absolutely perpen-

dicular to the crankhanger. All parts are protected from dust. It needs no graphite. · It is always clean.

Less Than Any Other

In the E. & D. four-point bearings no point on cone or spool sustains more than one-eighth of the rider's weight. In ordinary bearings it is always greater than one-fourth of the rider's weight, and this great pressure makes ordinary bearings run hard, breaks balls, cut cones and destroys the • bearing.

E. & D. four-point bearings are guaranteed for three years · becuase they wear less than any other bearing anywhere in · any bicycle.
