**A COTTAGE FOR \$1,460.**

DESCRIPTION AND PLAN OF A MOD-EST AND TASTEFUL HOUSE.

Together with a Somewhat Detailed Statement of the Merits It Possesses—It Would Make a Pleasant Home for a Family of Moderate Means.

The building season is well opened, and designs for tasteful houses cannot fail to be interesting. The one presented this week was furnished The Manufacturer and Builder, from which it is here copied, by Palliser, Palliser & Co., New York, and a house is now

PERSPECTIVE VIEW.

being built from it in Sing Sing, N. Y. In compactness of arrangement the plans leave little to be desired. It is designed that the cellar shall extend under the whole house, and water is to be furnished from a well or spring.

The attic is very spacious and two rooms are finished off in it, which are as good sleeping rooms as any in the house.

There is but one chimney, which is so placed that it can be used from all the rooms in the house; the staircase is also placed in a position to be easy of access from all parts of the house. Two doors are placed between the hall and kitchen, a feature which cannot fail to commend itself.

The windows in the hall and staircase are filled entirely with ornamental and stained glass; the other windows in the house have the lower sash glazed in two lights of ordinary glass, while the upper sash has a white light in the center and small colored lights on each side.

The interior is finished in a very pleasing yet economical manner; the casings of the doors and windows are trimmed with a back mold, though they are not mitered at the angles, as is usually done, but a square block,

GROUND FLOOR.

ornamented with sunk work, to be picked out in color, is placed in the corner and the molding cut square against it. This is a decided improvement on the monotonous mitered back mold which is seen in nearly every house. The rooms are all of ample accommodation to meet the requirements, and each chamber is supplied with a good closet.

The exterior is very striking, the front gable is very handsome, and is a free rendering of what is known as the Queen Anne style of architecture. The front veranda, and especially the hood over the entrance, is very pretty—in fact, this is one of the prettily de-

SECOND STORY.

signed cottages which always attract attention and add to the value of the grounds on which they are built. The cost is \$1,460.

**John W. Mason.**

John W. Mason, commissioner of internal revenue, was born in Monongalia county, Va., now West Virginia, Jan. 13, 1842. He was graduated from the Morgantown academy (now the University of West Virginia). Mr. Mason has been a schoolmaster, a soldier, is now a lawyer, and this is his first public office. He taught school until he was 25 years old. When the war broke out he joined the Union army, enlisting in the First West Virginia light infantry. He took part in the principal battles of West Virginia and the great valley of Virginia, serving with distinction until he was honorably discharged in September, 1864.

Upon leaving the army he took up the practice of law and succeeded. He made Grafton, W. Va., his home, and for twenty-two years practiced law there. In 1882 he was a candidate for congress in the Second district, but was defeated by only ten votes. His opponent was the Hon. W. L. Wilson. In 1886 he was made a member of the Republican national committee and was a member until 1888.

He was defeated at the last election for supreme judge.

**TO PRIESTLY'S MEMORY.**

The Memorial Recently Erected in Philadelphia by the Unitarians.

There was recently erected in the First Unitarian church, Philadelphia, a monument to the memory of the eminent theologian and scientist, Dr. Joseph Priestly. The day of the unveiling was the 150th anniversary of the birth of Dr. Priestly, and the celebration was attended by many prominent Unitarian preachers.

Dr. Joseph Priestly was the son of a cloth dresser, and was born in Fieldhead, England, in 1733. His mother died when he was 6 years old, and he was placed in charge of an aunt. At 16 he had made progress in most of the ancient languages. At 19 he entered a dissenting academy, having determined to become a clergyman, but when later he attempted to enter the ministry he was rejected because of his liberal views. His first book, "Lectures on English Grammar," was published in 1761, and about six years later his acquaintance with Benjamin Franklin, who was then in England, stimulated him to write his "History and Present State of Electricity, with Original Experiments." While he was employed in scientific research he did not neglect his theological studies. In 1796 he was elected to the Royal society. From 1773 until 1780 he was librarian or library companion to the Earl of Shelbourne, and it was during these years that he attained such eminence as a scientist. Among his discoveries made during these years were nitric oxide, oxygen and ammonia.

In 1780 he took up his residence in Birmingham, where he had charge of an independent congregation. In 1790 he enraged the people by his "Familiar Letters to the Inhabitants of Birmingham," and these were soon followed by "Letters to Right Hon. E. Burke, Occasioned by His Reflections on the Revolution in France." He was now the recognized champion of liberal thought, which made him the subject of severe condemnation. This feeling culminated on July 14, 1791, the anniversary of the French revolution, in a riot in Birmingham, during which his meeting house and dwelling house were burned and his library and apparatus destroyed, and many manuscripts, the fruits of years of industry, perished in the flames. Priestly escaped to London, and in 1794 sailed for New York.

He went to Northumberland, Pa., where his sons had preceded him. In 1796 he visited Philadelphia and delivered a series of lectures on Unitarianism in the old Universalist church at Fourth and Lombard streets. In declining to found a congregation, he suggested that a church should be started and conducted by laymen. His suggestion was acted upon. A society was formed in 1796, and in 1813 the congregation erected the first Unitarian church edifice in Philadelphia. In 1828 the building was replaced by a better building. About four years ago this second building was replaced by a new and commodious church on Chestnut street.

The monument at Philadelphia is not the first one erected to the memory of Priestly. His old congregation at Birmingham, England, erected a monument to his memory in their place of worship after his death, and in 1800 a marble statue was placed in the corridor of the museum at Oxford. The centennial of the discovery of oxygen was celebrated on Aug. 1, 1874, by the unveiling of a statue to his memory in Birmingham, an address in Paris and in the United States by a gathering of chemists at his grave in Northumberland, Pa.

The memorial at Philadelphia is over eight feet high and four feet deep, and it is set in the west wall of the church, slightly below the pulpit line, where it can be plainly seen from all parts of the auditorium. It consists of three tablets, a long one in the center and the smaller ones on each side, cut from solid blocks of Sienna marble, framed in a heavy cornice of Algerian marble. The tablets are separated by Grecian columns three feet in height; also in Algerian marble. Over the end tablets are projecting cornices like the roof of a Greek temple and ornamented at either end with cherubs. The entire length of the main cornice, which is Algerian marble, is carved on superb fretwork.

**Marcus A. Reno.**

Marcus A. Reno, at one time major in the United States army, who died in Washington lately from excessive smoking, was born in Illinois, graduated at West Point in 1857 and was assigned to the dragoons. After serving on the frontier he was commissioned captain in the First cavalry, Nov. 12, 1861. Subsequently he took part, among other engagements, in the battles of Williamsburg, Gaines Mills, Malvern Hill, Antietam and the action at Kelly's Ford, Va., March 17, 1863, where he was wounded, and was brevetted major for gallant and meritorious conduct. He was also present at Cold Harbor and Trevelian Station, and at Cedar Creek on Oct. 19, 1864, when he was brevetted lieutenant colonel.

From January to July, 1865, as colonel of the Twelfth Pennsylvania cavalry he was in command of a brigade, and encountered Mosby's guerrillas at Hanover, Va. On March 18, 1865, he was brevetted colonel in the regular army and brigadier general of volunteers. After serving as assistant instructor of infantry tactics in the United States Military Academy and in the President's Bureau in New Orleans, he was assigned to duty in the west. On Dec. 29, 1868, he was promoted major of the seventh cavalry, and in 1870 he was engaged with Gen. George A. Custer in the expedition against the Sioux under Sitting Bull. He was in the action of the Little Big Horn when his brave commander, Custer, with nearly his entire regiment, were slaughtered by the savages, and it was charged that only by great cowardice Reno saved his own life. He failed to bring his portion of the command up to support Custer when the latter was surprised by the Sioux. Subsequently, in 1880, Major Reno was dismissed the service, on the finding of a court martial for conduct unbecoming an officer. More lately he figured in the newspapers in connection with a divorce suit. Since his expulsion from the army he had resided at Harrisburg, Pa., and at Washington.

Interest in the story that treasure was buried many years ago in a hill in Kansas City is being revived there by the proposition of a railroad company to grade the district for a depot. The money was hidden, the story goes, by a Mexican gambler, and several unsuccessful searches have been made for it, one in 1873 by a Mexican.

**PAINLESS BEECHAM'S GREAT ENGLISH MEDICINE PILLS WORTH A GUINEA A BOX**

**Dr. J. Collis - Browne - Chlorodyne.**

THE ORIGINAL AND ONLY GENUINE.

ADVICE TO INVALIDS—If you wish to obtain quiet, refreshing sleep, free from headache relief from pain and anguish to calm and assuage the weary aching of protracted disease, in vigorating the nervous media, and regulating the circulating systems of the body, you will provide yourself with that marvellous remedy discovered by Dr. J. Collis Browne (late Army Medical Staff) to which he gave the name of CHLORODYNE, and which is admitted by the profession to be the most wonderful and valuable remedy ever discovered.

CHLORODYNE is the best remedy known for Coughs, Consumption, Bronchitis and Asthma.

CHLORODYNE acts like a charm in Diarrhoea, and is the only specific in Cholera and Dysentery.

CHLORODYNE effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation and Spasms.

CHLORODYNE is the only palliative in Neuralgia, Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

From Symmes & Co., Pharmaceutical Chemists, Medical Hall, Simla, Jan. 5, 1880. To J. T. Davenport, Esq., 33 Great Russell Street, Bloomsbury, London. Dear Sir,—We embrace this opportunity of congratulating you upon the wide-spread reputation this justly esteemed medicine

Dr. J. Collis Browne's Chlorodyne, has earned for itself, not only in Hindostan, but all over the East. As a remedy of general utility we must question whether a better is imported into the country, and we shall be glad to hear of its finding a place in every Anglo-Indian home. The other brands, we are happy to say, are now relegated to the native bazaars, and judging from their sale, we fancy that their sojourn there will be but evanescent. We could multiply instances "ad infinitum" of the extraordinary efficacy of Dr. Collis Browne's Chlorodyne in Diarrhoea and Dysentery, Spasms, Cramps, Neuralgia, the Vomiting of Pregnancy, and as a general sedative, that have occurred under our personal observation during many years. In Cholera, Diarrhoea, and even in the more terrible form of Cholera itself, we have witnessed its surprisingly controlling power. We have never used any other form of this medicine than Collis Browne's, from a firm conviction that it is decidedly the best, and also from a sense of duty we owe to the profession and the public, as we are of the opinion that the substitution of any other than Collis Browne's is a DELIBERATE BREACH OF FAITH ON THE PART OF THE CHEMIST, TO PRESCRIBER AND PATIENT ALIKE. We are, Sir, faithfully yours, Symmes & Co., Members of the Pharmacy Society of Great Britain. His Excellency the Viceroy's Chemist.

CAUTION—Vice-Chancellor Sir Page Wood stated that Dr. J. COLLIS BROWNE was undoubtedly the inventor of CHLORODYNE; that the story of the defendant Freeman was deliberately untrue, which, he regretted to say, had been sworn to. See "Times," July 13, 1864.

Sold in bottles at 1s. 1d., 2s. 3d., 5s. 6d., and 11s. each. None is genuine without the words "Dr. J. COLLIS BROWNE'S CHLORODYNE" on the Government Stamp. Overwhelming medical testimonials accompany each bottle.

CAUTION—Beware of Imitation and Inflation.  
Sole Manufacturer, T. J. DAVENPORT 33 Great Russell Street, Bloomsbury, London, "Eng
