## POETRY.

FROM THE NATIONAL CAZ TTE. THE INFANT'S DREAM.

Fair child! upon thy blooming cheek
A deeper shadow lies,
And breathings low and sweetly weak, Like fairy music rise;
And kindling o'er they snowy brow,
Is rapture's fleeting gleam,
'Till pulse and smile and tone avow
The gladness of thy dream.

Sleep hath its gift her life's dim close,
The dark and weary hour,—
A scene where twilight shades repose,
Upon the shutting flower:
And memory wins the aged thought Back to its earlier joy;—
With what is thy loved vision fraught,
My bright and sinless boy?

Perchance the Athenian's lofty creed In thee its proof may find, And as a spark yet scarcely freed, From Heaven's eternal mind, Unconscious of degrading fate,
Which severs from the sky,
The glories of thy primal state,
Still brighten on thine eye

Reveal the mystery,-hast thou flown Far from they place on earth, To revel in the mystic tone, The voice of starry mirth?
And space, with all its glerious isles,
Swells it before thy sight,
That thus in dim reflected smiles

Thy sleeping dust is bright? Surmise is vain, we only know
The founts of grief are sealed,
And thy young thought retains a glow,
Which earth could never yield; And o'er thy strengely joyous rest, Fair child! we darkly muse, For when were after years imprest With such etherial huss.

CALLIOPE.

[Published by Request.] RIDEAU CANAL.

This" grand and magnificent undertaking

1000 Galls old. Whiskey, 20 Ps. Satunetts, Wheel heads, For Sale by
JOHN G. PARKER, Store Street.

J. WATKINS

BEGS leave to inform his friends and the public generally, that he is now receiving and daily expects a further supply of

Hardware, Cutlery, &c.

Commendation of Sir Peregrine Maitland, and the forces.

It must be within the recollection of our readers, that his Excellency felt more than an ordinary interest in this undertaking; that he announced to Parliament, last session, "that the canal would be made on a scale more extended than he had ventured to assert; and that an officer of rank and accience had arrived for the purpose of superintending its execution." This information was highly gratifying to every man and the other canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment necessary to complete the canal will not exceed 30 miles—108 miles, the cutting and embankment of the Ottawa, a distance of 133 miles, the cutting and embankment of the forces.

It must be within the recollection of our readers, that his Excellency felt more than an ordinary interest in this undertaking; the canal being already formed by a chain of exceed 30 miles—108 miles, the cutting and embankment of exceed 30 miles—108 miles the canal will not exceed 30 miles—108

surate to the wants and extent of this fertile country rested.

But, how bleak and barren is the present prospect? The Lower Canadians, in order to enrich Montreal, and secure a monopoly of commerce injurious to the interests of U. Canada, have made the Lachine canal for boat navigation—the Directors of the Welland, in order to advance the price of their land, in order to advance the price of their own lands in the neighbourhood of Saint Catherines, extinguished our sanguine hopes of seeing Steam vessels ascend from Lake Ontario to the upper Lakes; and, to cap the climax, the British government misled, and other his recovery or interested indicates. no doubt, by ignorant, or interested individuals, is, contrary to the wishes of the Governor and the Province, pursuing the same

impolitic and painful system!
When Col. By arrived here, we did expect, knowing him to be a gentleman of the most enlightened and liberal policy, that

ciently large, not only to answer present, but future purposes; but this fond expectation, we lament to state, is blasted.

That this canal, small as are the dimensions of its locks and their unfitness for

It is termed a military canal. What nonsense! It does not merit the term—nor will
it, according to our views, answer the pur
pose intended. If a military canal be neces
sary for the defence and protection of U.
Canada, let it be made on a scale that will
enable us in case of disaster or defeat, to
regain what may be lost—let it not be confined to the tardy transportation of troops,
arms, ammunition, stores and provisions;
but let the locks be made on a scale sufficicools large to receive vessels of 140 feet ently large to ruceive vessels of 140 feet keel and 40 beam, and we can build and quip at pleasure, Steam war vessels on any part of the can I, and despatch them to military and naval operations, will be pre[WHOLE NUMBER 440.

It must be evident to every man who witnessed the operations carried on in this Province during the late war, that nothing but our naval ascendancy on the lakes, in case of future hostilities, can save this Prevince from the grasp of the enemy—an enemy who have convinced us that they can, ke the natives of the fast anchored isle. give and take blows.

From the revolution that has taken, or must shortly take place in naval and military affairs by the application of steam, our ascendancy can only be maintained by its power—and most certainly upon that power and its application, the fate of this Province

Suppose, for the sake of argument; that our naval power should be annihilated, would a canal of five feet water, its locks but twenty feet wide, enable us to overcome the dis-aster? We say NO!-Something more than the mere conveyance of troops, stores, &c. will be required to retrieve our loss.— Snips will be necessary: how are they to be obtained? Surely not by building them on the shore of a lake, in the possession of a bold, crafty, and victorious enemy? It is bold, crafty, and victorious enemy? It is true, we may retain possession of the naval dock yard at Kingston, but the conveyance of materials for Ship building to that post, would occupy more time than it would take to build, and equip them on most parts of the canal. Therefore, the locks should be made of the dimensions suggested by us: for it made upon the present narrow impolitic plan, and once defeated, our power and our hopes must vanish for ever!

If the canal should be executed according to

If the canal should be executed according to the scale now and heretofore suggested by us it would, perhaps, form one of the greatest and safest naval and military arsenals in the world. Secured by narrow and weil guarded passes and an impenetrable forest, no enemy could approach it—the dry and wet docks' furnished by it, at a very trifling expense, would be sufficient for the whole British navy: and the expense of completing it on this grand and enlarged scale; would not incur more than an additional expenditure of 15 per cent, upon the sum appropriated for the completion of the canal on the smaller scale.

er scale,
Those observations merit the serious attention
of Earl Dalhousie, Sir, P. Maitland and Colonel By; for, this canal will be a criterion, whereby future generations and future administrations, may decide upon their wisdom and their fame. We think it impossible that they would approve of the canal on the smaller scale, because it can neither add to our military nor naval security.

was highly gratifying to every man; and upon it our hopes of seeing a canal commensurate to the wants and extent of this fertile the benefit of which in following the canals,

When we see such statesmen'as Mr. Canning and Mr. Huskissen at the helm of affairs, we think it impossible that an object of so much importance to the government and the country, as the navigation of the Rideau by steam, can be sacrificed on account of a paltry saving of a few

thousand pounds.
We entered so fully on this subject in previous We entered so fully on this subject in previous numbers, to point its advantages as a commercial navigation, and the great revenue that must arise from it, that a repetition is unnecessary,—
Every man is convinced of its utility and productiveness—all are satisfied that the revenue of the canal will be sufficient to liquidate the whole expense of making it, within seven years after its completion.

Whilst writing on this subject, we would most willingly address a few words to our representatives; but, when we look back on their past conduct, and view the rejection of measures of

tation, we lament to state, is blasted.

That this canal, small as are the dimensions of its locks and their unfitness for military, naval, or commercial purposes on an extensive scale, will prove of great add vantage to the section of the country through which it passes, no man can deny; but beyond that section its benefits will be but little felt.

Viewing the extent of this canal—the short distance to cut (31 miles) to open Steam ada, and Michilimakinac, in Upper Canada, a distance of 950 miles—and taking into consideration the commercial and agricultural interests of the country, we cannot avoid condemning the weak, delusive, and impolitic plan adopted by ministers. Surely, if the government and the country could secure power and derive profit for row boats, the power and profit arising from it, if formed fold?

It is termed a military canal. What nonsense! It does not merit the term—nor will it, according to our views, answer the purpose intended. If a military canal be necessary for the defence and protection of U. Canada, let it be made on a scale that will enable us in case of disaster or defeat, to regain what may be lost—let it not be confined to the tardy transportation of troops, arms, ammunition, stores and provisions; but let the locks be made on a scale suffici

MOTTOE.

THE sale of the MARMORA IRON nart of the can I, and despatch them to Lake Ontario; and except the locks are made upon this enlarged scale, we venture to assert that the canal, so far as relates to military and naval operations, will be proand time. PET
