Battling with the Potnto Beetle.

A thrifty growth of vine is much protection against the ravages of the potato beetle, says the American Cultivator. Other things being equal the beetle will lay her her to avoid thrifty vines full of sap and hour and a half after being taken to his of the day. The poison should be applied unless hostesses will break through a bad

> How to Feed a Horse. It is about as difficult, as we understand it, for a man to find out just how to feed a rapidly and less masticated than others. But whatever grain you feed, do not let the horse drink immediately after. If you do, | that the trust will be safe in their keeping. much of the grain will be washed out of the stomach without being digested. See that the horse is properly watered a little while best food for the horse. It is too carbonaccous, or heating and fattening. Not every one wants a fat horse. Fat is not a know, we presume. A moderate ration of 'Yes; the same." grass, followed with dry bay, and always "Oh!"-Life, secompanied with oats, will do a horse good.

chould be used to best advantage as manure.

Orchards may be cultivated and croppe for many years after planting, and many advocase their continued cultivation, even through cropping ceases, after they come into bearing. Many of our farmers find a better way, in our opinion in pasturing the orchards with swine or sheep, after they arrive at the age when crop ping is inexpedient. We do not think very highly of the value of the short, weak grass that grows under the shade of apple trees, but whatever of value it contains may as well be worked over in the digestive organs of animals and its nutriment extracted as to rot on the ground. We would pasture the orchard with swins or The gophers are said to have caused sheep, not so much because of the grass organs than that they should be allowed to Members of the Elmira Farmers' Club, pass through their various transformations equad had run around and down to the at a late meeting, asserted that innumer. and multiply their species to prey upon

soil without gradually exhausting it, and then it must be fed, in some way, if expeated to continue productive. To add still more to the supply of manure, feed the animals pastured on the orchards liberally with rich foods, Skim-milk, cornmeal wheat middlings, oats, peas and oil meal all afford manures rich in nitrogen and phosphates, and all that is not converted into pork, or multon or wool, will be left on with stock rearing and feeding, that the manure question must not be disregarded. The pasturing orchards with swine has the not mere theory, but theory supported by many examples. Some prefer turning in their swine without rings in their noses and permitting them root over the surface repeatedly, keeping it mellow and destroying any cut worms and wire-worms in the soil. This is much better policy than allowing the grass to mature and removing it as bay. The latter practice is hard upon an orchard. But we think we prefer keeping

There has never been a London season with so few dances, says the Pall Mall Gazette. At homes, with or without music. receptions, with drawing room entertainments, have been plentiful enough, but the old fashioned ball seems to have become a thing of the past. No doubt one explanaeggs on the weakest, feeblest-growing is not the only one. A bad and selfish habit has lately grown up in London The latter were a very pale pink crope, brimmed with brackes of pink roses and moss green ribbone, and dismond orns makes the vine more thritty, holds of some cattle cars this morning.
