savs Dr. C. E Page, the remedy is a very simple one. Files are scavengers, and only enter-at least take up their abode indwellings from which the sunlight and air are wholly or largely barred out. Even screens are objectionable, for it is impossible for air to enter as freely as through a wide open window; besides, the creatures will get in by hook or crook, and when they have endured the stuffy indoor air as long as they can with due regard for their health (!) and sigh for the pure atmosphere without, they are kept in by the screens, to which they cling and do their best to obtain fresh air by breathing with their noses through the meshes, while the human inmates starving and poisoning, growing weak and predisposed to sickness, are content with the devitalized air as their only respiratory food, like drink ing from a stagnant pool. The truth is that sunlight and fresh air, if allowed the freest cutrance to any home, will shortly leave nothing for the flies to do, and shese little friends will simply make oscasional excursions, singly or in pairs, to inspect the premises, not resting even to to inspect the premises, not result even to the premises, not result even to the paint; while the main body upon her breast and clasps her fingers about rakes in ducats, which is eminently in for a few things.
