Miss and mining in Americal Rightly should one of the most magnificent of all the Exposition palaces be devoted to mines and mining. You will find it situated at the southern extremity of the western lagoon between the Transportation and Elec-tricity buildings. The building is 750 feet long by 850 wide, and it has its inspiration in early Italian renaissance with which sufficient liberty has been taken to invest the building with much ammation in appearance. The exterior design partakes of a decidedly French spirit. Simple and straightforward in plan it embraces on the ground floor spacious vestibules, restaurants, toilst rooms, etc. Entrances will be around the building.
